

Sir Michael to speed Mercury on its way

by Donald Kennett
BL'S saviour Sir Michael Edwards is all set to work wonders for the UK's forthcoming alternative telecommunications network, Project Mercury, plans for which have already spurred British Telecom to vigorously competitive behaviour.

Last week, he was appointed as a part-time non-executive director of Mercury Communications with a view to becoming its chairman "in due course", probably at the beginning of next year.

Sir Michael joins a Mercury Communications that is at an advanced stage of negotiations with more than 20 potential major customers and is preparing to open its first services next March, almost six months ahead of its initial plans.

A spokesman for BL said Sir Michael had always planned to leave at the end of 1982, although that meant the full results of his work would not show until after he

had left. He had set the company on course for needing no more government aid after the end of 1983 and the first evidence of this would appear in the half-year results due in September, the spokesman added.

Sir Michael is said to be attracted to Mercury by the new technology, the new markets and the significant growth potential of the company. All his managerial life before BL was spent at the Chloride Battery group, which he joined as a management trainee in the financial area in 1951 and left as chairman in 1977.

Mercury Communications' marketing director Stuart Bailey said: "Sir Michael is a leading figure of British industry who has an enormous range of skills which will be very welcome to us. He has great personal presence, drive and capability. He will be an excellent man for the job."

Chief executive Derek Evans said: "We are delighted that Sir

Michael has agreed to join us in the Mercury venture. His considerable experience will be of great value to the company."

The initial plans for the Mercury network are for £50 million to be invested in providing leased connections for businesses, using optical fibre cables laid alongside railway tracks for the trunk links between 30 towns. Distribution within the towns is to be handled by line-of-sight microwave and cellular radio, a technique used elsewhere for mobile telephone services.

The network is due to start operating next year and details of the first services, in London, are to be announced this week or next week.

Mercury's prospects include a vigorous campaign of opposition from trade unions led by the Post Office Engineering Union and a pledge from the Labour Party to turn it over to British Telecom if it returns to power.

ICL unions accept 5% — except the engineers

by Sarah Hardcastle
ICL staff are to get their first across-the-board pay award for two years. The company's five per cent pay offer has been accepted by all the ICL trades unions with the exception of its service engineers, who are considering strike action unless the offer is significantly improved.

But the pay deal has been accepted only to the end of the year when the five ICL unions, which bargain jointly, will put in a further claim.

Speaking on behalf of the bargaining collective, Tim Webb, national officer of ASTMS, the largest of the ICL unions, said: "The offer has been accepted but with the proviso that a further claim will be made in January next year. This will allow us to ascertain ICL's level of recovery. I've no idea what the new claim will be but it will be based on ICL's full year profits."

According to Webb, the offer was accepted by a two-to-one majority by the main body of ASTMS members which number just over 4,000, and the other ICL unions: AUEW with 700 members, APEX and ACTSS with 600 between them, and BESA.

Following last year's redundancies, about 60 per cent of ICL's 14,000 workforce is now unutilised.

The offer will raise basic salaries by five per cent with a minimum increase of £234 per annum for the lowest paid. A merit increase, awarded at ICL's discretion, has been agreed, raising the company's salary bill by a further three per cent.

Though ICL made no across-the-board pay award last year, scale increases and London allowances have been made by the company since the last pay round in 1980.

Left out of these interim awards were the service engineers. As a result, the 1,800 service engineers who are members of ASTMS, but bargain independently of other ICL unions, are now threatening industrial action.

So far ICL has made a minor improvement to bonus payments, but according to Chris Ball, ASTMS officer for the ICL engineers, "this is not likely to be acceptable."

In the meantime, ASTMS is battling the engineers by post over the proposal for a series of one-day strikes. If the proposal is carried and ICL fails to produce a better offer, "industrial action could apply from July 16", said Ball.

BARRATH... "A lot of government support."

Govt may help with high-tech premises

by Our Parliamentary Correspondent
NATIONAL and local government are to tackle the problem of attracting high technology companies to the UK.

John MacGregor, junior Industry Minister, told the Commons that the question of providing suitable premises for international high technology companies was being considered both in the private and public sectors with the aim of making sure that these companies came to the UK.

He was responding to a question from Dudley Smith, MP, who asked the government about evidence that these companies were unable to find suitable premises in Britain and were being forced to set up on the Continent.

Smith pointed out that the fastest growing sector of British high technology industry was in companies employing under 100 people and asked if the government had considered helping these companies to find accommodation, particularly in the Home Counties.

And he urged the government to

take steps to ensure that foreign companies in high technology were encouraged to set up in the UK.

MacGregor said that the traditional sort of industrial estate was not best suited for the new campus style developments favoured by the high technology companies. Both local authorities and new town authorities were moving towards the provision of premises suitable for offices or for high technology manufacturing.

This was often being done in collaboration with universities, he said, and claimed that science parks comparable with anything available in Europe were now on offer in the UK.

MacGregor added that the question of whether or not current planning procedures might inhibit this type of development was under consideration.

A Computer Weekly survey carried out with chartered surveyors Herring Son & Daw earlier this year revealed that 64% of the computer companies polled claimed that there was a lack of suitable buildings for their expansion in the UK.

EDWARDS... Always meant to leave BL at end of 1982.

To you, six months payment free — offer from Elbit

ELBIT Computers is banking on a six-month payment-free package backed by the Israeli government to encourage UK sales of its systems.

The Haifa-based manufacturer of mainframes, minicomputers, terminals and communication equipment will announce the deal in a few weeks time.

After the six-month free period customers will make 10 equal payments over the next five years at a 10% interest rate.

Elbit's UK managing director Yossi Barrath said the terms would be available for both dealers and end-users, and there would be no minimum purchase amount for buyers to qualify.

Barrath admits that Elbit gets a lot of government support, and that all computers scheduled for export receive a special subsidy. The Israeli government matches development costs of Elbit systems pound for pound.

Elbit has ambitious plans for the UK, which it considers the most important market in Europe, but it still has a long way to go before it meets its "minimum target" of £10

million a year turnover. Last week it signed up GCS Engineering to provide third party maintenance for its existing installations in the UK, and GCS managing director Bill Nichols says he is convinced that it will be a lucrative deal for his company in the long term.

Elbit manufactures an IBM 4300 software compatible system, which has been sold in Europe by Nixdorf. The recent release in the UK by Nixdorf of its 8890 mainframe is based on Elbit hardware. But in spite of the new financing deal from Elbit, Barrath does not expect to be in much direct competition with Nixdorf.

Nixdorf, he says, is marketing the 8890 with its own operating system in the UK, while Elbit will go for the IBM market.

Barrath says Elbit is already working on a product which will be the basis of the next generation of Nixdorf mainframes.

Elbit had worldwide sales of \$72.7 million and pre-tax losses of \$953,000 in the year ending March 31, 1982, compared to 1981 sales of \$61.9 million and pre-tax loss of \$3.6 million.

Disc firms seek new ways to record data

by Kevan Pearson
THE latest generation of disc drives as typified by IBM's 3380 and rival products could be the last of their kind as disc manufacturers seek new ways of recording data.

The new systems will record into rather than along the disc surface and will use magnets arranged side by side.

The present generation of large scale disc drives are the culmination of 20 years of development in conventional recording techniques, which use a longitudinal magnetising method.

The crunch has come for conventional systems because of the rocketing demand for more memory to be crammed into a smaller space, since the physical size of most DP departments is fixed. The new perpendicular recording method allows much higher densities than the old system. This is imperative given the burgeoning demand of disc memory as witnessed by the furore over the non-appearance of IBM's large scale 3380.

The problem with the existing disc drives is that to achieve the

best design of magnetic recording pattern on the ferrite platter the layer of magnetic coating has to be very thin. This has led to severe problems as the magnetic coating is prone to come away from the base, again one of the difficulties IBM had in getting its 3380 into production. It also limits the bit density of discs to, at present, between 10,000 and 15,000 bits per inch.

Even if the magnetic coating remains intact its thickness can lead to a significantly higher error rate because of the inherent weakness in the magnetic signal.

The proponents of perpendicular recording, where the data is recorded into the magnetic material rather than along it, claim that the new method will allow bit densities, or flux reversal densities as they prefer to call them, of over 100,000 per inch, or between six and 10 times the level currently available.

However, the new method is not without its own problems. One is the sophisticated alloy of chromium and cobalt which is used as the magnetic medium.

SALES BRIEF Honeywell wins \$602m Navy order

HONEYWELL and Burroughs have won multi-million dollar contracts from the US armed forces for data processing equipment. The largest, for \$602.2 million, was awarded to Honeywell by the Navy for 1,800 DPS-6 processors and peripherals to be supplied for shipboard administrative work over the next 10 years. The company also won a \$46.8 million contract from the Army for business oriented systems for its bases in Europe.

Burroughs won a \$144.4 million Air Force contract.

Midas touch

BIS SOFTWARE has made record sales worth £2 million of its banking and insurance system Midas and Folio during its first quarter this year, with Midas sales in Europe, the Middle East and Africa accounting for nearly half. It has sold 250 Midas systems worldwide since 1976.

Million drives

CALIFORNIA based Tandon, which claims it will this year become the first manufacturer to deliver a million 5¼-inch floppy disc drives, has won two orders which together exceed last year's total sales of \$54 million. The first, from VDU maker TeleVideo Systems, is for \$43 million worth of floppy and Winchester disc drives to be delivered over the next two years. A second \$37 million order from an anonymous small computer manufacturer is to be fulfilled within the next six months.

Irish choice

SEVEN car dealers in Eire have installed Wang 2200 small business computers running motor traders' software supplied through the Dublin office of Kordig Computer Company. The whole deal is worth about £500,000.

Motor Deal

LONDON-BASED UK subsidiary of MAI has made a sale of its Deal business system for motor traders to White Brothers Cars and Hire of Taunton. The system will run on a Basic Four 210 mini and its functions will include accounting with audit trails and immediate posting to all ledgers, vehicle billing histories, payroll and word processing.

Italian viewpoint

ITALIAN Post Office has ordered 200 UK-made viewpoint terminals costing about £200,000, from Philips for use in a public viewpoint trial. They are all 14-inch colour business terminals with alphanumeric keyboards. Philips is already exporting terminals for viewpoint trials in countries including France, North America, Australia and South Africa.

Councils' system

SWANSEA-BASED local government software specialists Business Micro Systems has made five sales of its systems to Swansea, Stroud, Trent, Gloucester, Tewkesbury and Carmarthen Councils. Totalling £200,000 in value, the systems all run on Digico M160 or M28 minis and are used for direct labour organisation, accounting, word processing, handling planning applications and providing links to ICL and Honeywell mainframes.

NCR for Swiss

SWISS Bank International has installed an NCR 1900 in its London office to support its dealing activities in syndicated loans and international securities such as Eurobonds. The machine will share peripherals with an existing NCR 8430 which is used for development work.

FIFTH GENERATION — 1

More than 200 delegates met in London last week to discuss the fifth generation of computers. . . Our staff report

Japanese report seen as a 'technological Mein Kampf'

by Kevin Cahill
THE first full-scale Western conference to consider the Japanese fifth generation computer project got off to a controversial start. The project was described as a threat, and the report on it as a "technological Mein Kampf."

Conference chairman Alex d'Agapeyeff who so described the Japanese endeavour, went on to summarise his gloom-laden reaction by calling the project a "Computing Apocalypse."

The Japanese project, now known inside Japan as the Knowledge Information Processing System, or KIPS, is funda-

mentally a user-driven attempt to make the next generation of computers serve user ends, and solve real problems.

The central objective of the Japanese project, to which a representative collection of the world's technologists has been invited as participants, is to devise a mainframe series which will be self-programming.

By structuring the new architecture around a CPU of 1,000 processors which is interfaced to a speech and natural language input/output interface, and with instantaneous access to a 100-gigabyte universal database, the Japanese hope that when you ask their future computer a question, you get an answer, not an invitation to rewrite the question in Cobol.

Describing the project as a brilliant marketing strategy by the Ja-

panese, Professor Ed Feigenbaum, of Stanford University, US, said that the Japanese were picking an economic point beyond the view of IBM and US companies.

In doing so he felt that they were expressing a view of computing in the 1990s which was shared by many American users and venture capitalists.

Feigenbaum added that the Japanese have correctly spotted the beginning of the age of machines which engage in symbolic manipulation, and not numeric computation. The selection of technologies — array processing non-von Neumann architecture, VLSI — were also good, and likely to yield the desired result. Adding to this the quality of Japanese engineers and their speed of learning, Feigenbaum seemed convinced that the Japanese would make it.

But there were risks, Feigen-

baum suggested: "Despite the level of engineering technology involved, the project is based on software, and Japanese managers are not comfortable with software; the project is very ambitious in terms of the state of current knowledge and carries great risk, a position which Japanese managers are normally averse to; nor is there a lot of in-depth knowledge engineering experience in Japan, and that will be a significant handicap," he said, "but 10 years in this industry is a long time."

Feigenbaum suggested that if the Japanese achieved only 20% of their goals, they would still wind up ahead of the game.

"As long as they are on the right vector and on the right course, it does not even matter if they miss their speed goals by orders of magnitude, they will still have a major lead on American companies."

FEIGENBAUM... Convinced the Japanese will make it.

by Kevin Cahill
MYTHS about the Japanese and their fifth generation project were exploded by Philip Treleven, professor of computing at Newcastle University, at last week's London conference.

The Japanese have a clear idea of what the project itself is, he said, although some commentators have suggested that either the project is a "dummy" pass to divert attention away from what the Japanese are actually doing, or that it is speculative.

Treleven and Ed Feigenbaum of Stanford University, both agreed that the image of the fifth generation computer was clear, and probably attainable.

Ability to see it through

According to Treleven, the Japanese working on the project have an adequate knowledge of artificial intelligence research to achieve the logical inference functions required of the eventual central mainframe processor, and the interface devices.

The innovations required to achieve the device were well within the capabilities of Japanese computer scientists who could, contrary to popular wisdom, innovate as well as the rest of the world.

According to Treleven, it was

not definite that the Prolog language would be used.

Prolog is a relatively new computer language, based on statements in formal logic similar to the proposition, IF A then A.

Its proponents claim that it can solve problems, particularly in scientific areas, which could not previously be solved using conventional languages such as Fortran.

Its potential importance in the Japanese project is that it appears to fill the gap between the natural language interface and the

machine processes themselves, a gap for which there is no other apparent solution at the moment.

Prolog was first implemented in France in 1972 and is widely used in Hungary, mostly for scientific applications.

Confirmation of Prolog for the fifth generation machines has a central bearing on whether the Japanese will use existing semi-inferential software such as Fortran, or try to develop their own. There is grave doubt in many circles as to whether any existing computer

languages can serve a function in the 1990s.

The use of Prolog would certainly imply that moves to make Cobol obsolete were under way.

Objections that the existing investment in programs written in conventional programming languages was so great that it would not be abandoned, were swept aside by several speakers.

Languages like Cobol were tools to solve problems, as were the programs written in those languages. If better tools came along, most speakers seemed to think they would be adopted without much regard to the existing user base of programmers in conventional languages.

"HOLD YOUR HEAD UP HIGH"

No need to hide your head in your hands when bottlenecks arise through defective or even missing magnetic heads. For when it comes to magnetic heads in particular we haven't exactly been nodding off. Hence the following are always in stock:

New CDC magnetic heads of various types
CDC exchange heads (Exchange of defective heads against new or reconditioned units)
Magnetic heads (new and reconditioned) of most kinds: Ampex, DRI/Diablo, Wangco, Perlec, ISS, Caelus, Iomec, CalComp and many more

Our additional service package for wise guys: Air filters for a wide variety of makes
CDC — Iomec — Caelus
Wangco — Perlec — Ampex — CDC as well as spare parts
Magnetic Disc Cassettes
Magnetic Disc Packs
CE-Cartridges
Rigid Discs
Our mobile service is always at your disposal!

'Mankind undermined by false information' fear

by Philip Hunter
MUCH more emphasis must be placed on research into software technology if the Japanese fifth generation project is to succeed. In a paper to the SPL fifth generation conference in London warning of the dangers of concentrating too much on hardware and social objectives, Professor Manny Lehman, of Imperial College London, pointed out that the problem of producing and maintaining cost-effective software has plagued the computer industry since its inception.

This problem would increase with the advent of new complex fifth generation hardware architectures unless a great effort was devoted to coming to terms with the new complexity of the software that would be required.

"Mankind will be gradually, insidiously, undermined by an accumulation of incorrect information that could even lead to the complete destruction of society as we know it," he said.

The published fifth generation plan made passing reference to

simple verification of programs, but completely ignored the biggest problem with all software - the issue of correctness, he added.

Lehman also criticised pioneers of expert system for fostering the belief that they are a panacea for all problems. "Expert systems feed the tendency to believe what the computer tells us is gospel," he said.

Lehman claimed that HMS Sheffield was sunk in the Falklands war because an expert system had failed to detect the lethal Exocet missile.

"The system was told Exocet was a friendly missile," he said.

Lehman was talking of the rule-based expert systems such as are sold by SPL, which sponsored and organised the conference. "I would place an equal or higher priority on software systems engineering than on rule-based software," he said.

The theme of Lehman's paper was echoed more meekly by other speakers. It was agreed that more money would have to be found for research into software techniques to come to terms with the chal-

lenge presented by new hardware architectures.

Michael Duff, of University College London, complained that some of this vital research was being undermined by an anomaly in the way grants are allocated. "A person who makes a proposal for a research contract may not charge his time to that contract," he said.

In a panel discussion, Professor Donald Michie, regarded by some as the founder of rule-based expert systems, ignored Lehman's criticism of his beloved subject, and urged that his comments be seriously considered. "I hope Manny Lehman's eloquent remarks earlier will stimulate an improvement in communications between the various people involved," he said.

In a speech at the conference reception, Information Technology Minister Kenneth Baker gave a hint that the government might be able to find some of the money urgently needed to meet the Japanese threat. "I hope to have some proposals to put in September," he said.

STEFIK... Divide and conquer is the key.

VLSI chip of the future

by Philip Hunter
THE Japanese fifth generation project was criticised by some delegates for failing to address the whole spectrum of computer development. But this criticism could not fairly be levelled at the conference itself, which covered software engineering, expert systems, natural language developments and hardware configurations.

There was only one paper speculating about developments inside the VLSI chip, given by Mark Stefik, of Xerox Palo Alto Research Centre, US.

Stefik described how a hierarchy of designs on the chip could be implemented to perform forks, joins and other operations. "The principle of divide and conquer is an essential part of mastering otherwise overwhelming tasks," he said.

Stefik emphasised that his approach differed from the so-called silicon compilers, in which the behaviour of the chip is specified at just one level.

Silicon compilers fail to exploit many design possibilities, he said.

So far, Stefik's team at Palo Alto has completed some preliminary experiments with hand-worked examples, which, he said, suggest that great savings of time and space could be made by putting software into a chip. The question is whether this approach will make a significant contribution to the vast time and space cuts that various speakers agreed will have to be made to maintain the momentum of the computer industry.

'Machine takes 20secs to do what humans can do in a millisecond'

by Claire Gooding
MACHINE speed is still one of the biggest problems facing researchers who are working on "knowledge machines".

"Programs have no quick way of finding relevant knowledge," said Danny Hillis of the Artificial Intelligence Laboratory at Stanford, speaking at the fifth generation conference. "Humans do it in a flash, but right now it takes 20 seconds to do something on a machine which humans do in a millisecond."

The paradox of present research, said Hillis, was that machines were getting slower as they built up knowledge systems. In Stanford there is a project, known as the Communication Machine, designed to crack the problem of speed by dispersing knowledge between a mass of specialised processors.

"The trick is to design a network where messages can be sent very quickly," said Hillis. "Each

node in the network has knowledge on one subject, and addresses of others with information on related subjects. It is out of the range of possibility to have a machine with a million processors on it."

The Stanford team working on the Communication Machine reached the point where they should be a knowledge network operating with 100 or more nodes, this time next year.

The system would deal with knowledge manipulation and recognising algorithms, analogies, and making commonsense deductions without difficulty.

The Communication Machine fits in with other fifth generation work on speech, vision, knowledge bases and robotics.

"The biggest obstacles facing the development of these machines are communications, pedagogy, fault tolerance, and teaching," said Hillis.

Hardware for ideal 5th generation machine

by Philip Hunter
DELEGATES to the SPL fifth generation conference were bombarded with possible hardware configurations for the ideal fifth generation machine, and many must have come away more confused than when they arrived. But at least one paper, by Philip Treleven of Newcastle University, made an attempt to reconcile the various approaches.

"I believe in a system architecture embodying special purpose computers like dataflow and reduction machines," said Treleven. Each computer could itself contain several hardware arrangements to suit particular different applications, he added.

Treleven described the three types of hardware that had been investigated by his architecture research group at Newcastle. These

TRELEVEN... Room for several hardware architectures in the ideal fifth generation system.

are dataflow, control flow and reduction.

Treleven believes all three approaches should be implemented in a single system because each works very well on some applications while floundering on others.

In general, control flow is good for processing large data structures where the same values may be used many times, but not so good for evaluating strings of simple arithmetic expressions.

Dataflow and reduction work well for evaluating large numbers of relatively simple arithmetic expressions, but are less successful than control flows on large data structures.

But one form of reduction called graph reduction, holds promise for attacking large data structures. Dataflow and reduction embody no concept of data storage. As dataflow, execution is tied to data as it comes off the input device. For example, an arithmetic expression is evaluated when and only when all the necessary data have arrived.

A dataflow program can therefore be executed while input is still coming in, and could well work with ICL's Contura Addressable File Store (CAFS) controller, which enables data to be selected at the speed it is off disc.

Control flow differs from dataflow and reduction in that there is no movement of data once it has been read in. Unlike dataflow, where tokens tell data items what to go, control flow uses tokens to specify what action is to be performed on data items.

FIFTH GENERATION - 3

In London the ideas were aired... in Edinburgh the practical people thrashed out their problems

Can the chip engineers come up with the goods to match the concepts?

by Hedley Voysey
ALL the amazing ideas represented in fifth generation feats of "knowledge engineering" will never come to pass, except for the very rich, unless design engineers produce the machines to match the concepts. That was the impression gained at last week's workshop for top chip designers in Edinburgh.

Peter Hart heads the Fairchild Laboratory for Artificial Intelligence Research. Formerly he led the team at SRI International that made significant progress in edging AI from the realm of theoretical possibilities towards practical progress, including a working vision system for certain types of application.

Hart notes that "Along with the general problem of conceptual complexity, we face the problem that our programs have apparently unbounded appetites for cycles and memory. The computational demands made by AI programs make it natural to consider whether VLSI-based architectures can be developed for 'AI-style' computation. Of specific interest would be architectures that provide high levels of concurrency."

This shows the link between Very Large Scale Integration efforts in design and the AI world very clearly. The key words are hammered at all the time by both sides of the fifth generation equation - the AI method builders and the computational superchargers.

Carver Mead, from the California Institute of Technology, who with Lynn Conway of Xerox's Palo Alto Research Centre wrote the book that set out the new methods of designing in VLSI, states that the entire problem of VLSI is "a challenge in complexity."

Part of the challenge is understood in principle. There are

KOWALSKI... Algorithm is equal to Logic plus Control.

some "regular" patterns of computing which can be parcelled out on a divide-and-conquer basis to speed up the computations by doing things in parallel. The existing example is in vision work, and parts of speech recognition.

In both of these areas the captured signals can be sent in automatically delegated squadrons through networks of small specialist signal processing units. All types of regular designs for such concurrent computations are being tried out. At Carnegie-Mel-

Some AI workers believe that AI can help solve some of the VLSI design issues.

The newest machines for the fifth generation all try to exploit as much concurrent, parallel computation as can be squeezed out of a strategy for problem solving. This happens to mean using new classes of programming languages for best results, although it is possible to use existing ones.

To check whether the solution really works via parallel computations often means doing a mass of theorem proving; often this is supported by machine theorem provers. Once again the worlds of AI and predictable engineering in VLSI settle on the same intellectual patch of tasks.

The splendid text on logic as a programming tool produced by Robert Kowalski of Imperial College, maintains that an "Algorithm is equal to Logic plus Control". It should be understood that control in this sense may be a whole mass of context to provide "meaning" to refine the "logic".

The strength of the Kowalski proposition is very much a matter for debate, and it has been debated for the last eight years since he enunciated it. But to all those involved in this discussion there is no doubt about the support needed by computer architecture when the context, or control knowledge, is ramified in the extreme way that it seems to be in many AI-type problems.

Some AI workers maintain that the gauging of this ramification in context is exactly what separates an AI problem from run-of-the-mill data processing. In other words, we have become used to dealing with logic applied to data which can be treated as self-sufficient in meaning, like accounting data.

The interesting problems all mean being careful about applying logic in appropriate contexts. All this contextual stuff, whether expert rules or knowledge geared to the concepts of that particular problem, which is in hand at the time, has to be on hand somewhere - which is both a storage and a processing problem. So once more we are all back waiting for computer architects to provide a "machine for learning" in VLSI driven form.

The Japanese state that new machines are needed for data flow designs, which are machines which execute when the operands arrive rather than rush about fetching the operands (hence the name), and also database machines which can add deduction and inferencing powers to use databases which are really general forms of knowledge store, as well as pattern processing units for vision and speech.

But AI workers have not stood still and the ideas used by them for tackling problems, their description and representation, both symbolically and as machine handable pieces, keep moving on. At this point the two complexity issues, that of VLSI design and AI problem solving techniques meet arm-in-arm.

Will the hardware solutions to the problems of "knowledge engineering" appear in Edinburgh?

Don't let your Peripherals become Terminal!

Act now! Don't let your computer peripherals die of stress and neglect. Make sure that they receive the treatment they deserve. Remember, they play a vital role in your business and if they suffer a coronary just think of all those poor little records that will go unprocessed.

Proper treatment on a regular basis can prevent the inevitable. Data Dynamics have three strategically located clinics and a team of mobile professional doctors based throughout the UK. We are even into transplant surgery and carry a vast array of organs for transplant in stock.

For better dot by dot printing...

Data Dynamics 1303 120cps Printer

Dot for dot, our 1303 represents better value than all its competitors. The 1303 is a high-performance 120 cps dot matrix keyboard printer offering many advanced features at a very attractive price. We now offer the British built 1303 at prices ranging from £725 to £985, depending on quantity - a price unmatched by any other manufacturer.

The 1303 includes a wide range of features as standard. For example, unlike many imports which are housed in plastic cases, the 1303 has an attractive and very compact metal case and plinth. This is a particularly significant benefit when the printer is used in those environments where the wear and tear of everyday use would otherwise cause damage.

As with all our terminals, the 1303 carries a comprehensive six month warranty. This warranty covers all parts, labour and travelling expenses (within the mainland UK). We are also willing to offer a further six months full parts and labour warranty for only £30!

Goals of the fifth generation

by Kevin Cahill

THREE years ago the Japanese commercial and academic community, under the guidance of the Ministry of International Trade and Industry, set up a series of committees to consider the contribution of high technology to the solution of Japan's perceived social and economic problems towards the end of this century, and the role that Japanese computers and technology should play in the fifth generation of computers.

The culmination of the first stage of the project as it was set up in Japan took place at an international conference in Tokyo last October.

The conference to which most Western nations and many commercial organisations such as IBM sent delegates, received a pre-

liminary report which summarised the Japanese work for the first two-and-a-half years of the project.

The report reiterated the Japanese invitation to foreign commercial and governmental organisations to join Japan in building the fifth generation machines, and began by defining the strategic problems which the Japanese expected the technology to solve.

Summarised these were:

- To increase productivity in low productivity areas, such as agriculture, fishing, distribution and the public services.
- To help Japan meet international competition and at the same time to enable Japan to make a significant contribution to international co-operation.
- To assist in saving energy.

Following this general social

goals, the report then set out a series of functional requirements for the technology. These were:

- A man-machine interface at the input/output level, which will operate on spoken language, graphics, images and documents.
- The conversion of speech information into practical use.
- The ability to perform logical operations.
- To eliminate, from the point of view, the use of most current programming languages.

PASCAL A Design Tool for microcomputer Systems Engineering

An intensive course of lectures, tutorials and workshop sessions.

September 20th-24th, 1982
BRUNEL UNIVERSITY
Phone: 01 848 9781 ext. 738 or 718 for Course Brochure

CAP in Trader Point despite dealers' doubts

CAP has signed an enhanced Trader Point agreement with ICL, despite concerns among other Trader Point dealers over ICL's operation of the scheme.

The agreement between CAP and ICL has been described as "collaborative", and is not specific to any particular product. ICL and CAP have worked together in the past on many projects, including that of British Defence Software, which is a consortium of defence information technology suppliers.

CAP sees the agreement as covering a number of projects, not necessarily all within the UK, and says that it is examining a number of joint efforts that will shortly be announced under this umbrella.

Representatives of CAP who attended the Computing Services Association joint seminar with ICL last month, however, expressed doubts about the way ICL was putting Trader Point into operation, a view echoed by delegates from other companies.

"We are considering Trader Point at the moment, because we market human resource systems based on IBM equipment, which could be converted to run on ICL's as a joint conversion and marketing exercise with ICL," said Jeff England of IAL Gemini.

"In a discussion with ICL at the seminar about how far local salesmen will decide which Trader Point dealer can best serve the customer, ICL seemed undecided about whether the salesman would offer the customer the full choice of software available," he said.

This was confirmed by Stephen Valdez, marketing director of Data Sciences International, a company which is also about to sign a Trader Point agreement.

"It was an opportunity to put cards on the table and ask frank questions, such as: If an item of software appears three times in ICL's catalogue, with ICL in competition, is the customer left to choose?" said Valdez. "ICL said that if it has an appropriate piece of software, it will try to sell that and yet must protect its own salesmen, who get commission on software sales."

ICL recently also went against the spirit of the Trader Point agreement by purchasing application software from Systemsoft in order to please a customer ordering an ME29, who wanted ICL to take sole responsibility.

ELSE... Looking for "additionality".

Govt aid plans may exclude small firms

SMALLER software houses may miss out on government funds to aid development if qualification rules for the Software Products Scheme are not relaxed.

Under the scheme, the Department of Industry is to provide £10 million in grants to help British companies produce innovative software with good export potential. But there are two stumbling blocks for small companies: work must not have been started prior to approval of the application; and approval itself might take up to three months.

Companies wishing to apply for a grant are asked to submit a 30-page proposal to the National Computing Centre outlining their plans, and showing how they propose to capture a share of the market.

Three weeks after sending in the proposal, they will be invited to give a presentation, an assessment of which will go to David Fairbairn, NCC head, who will send a recommendation to the Department of Industry. He may also ask for advice from members of the SPS Advisory Committee drawn from the DoI, NCC and Computing Services Association.

"I think the rules will have to be slackened for the scheme to work, because the timescales are much too long," said Avis Clarke, a consultant with Micro Scope software house. "We will probably submit a rough proposal to get some idea of what chance we've got, and then waiting any time."

This was a view shared by David Burland, manager of Bradford University Software Services. "It's quite reasonable that people should be asked to justify their plans, but what will they do for three months? The project may well be its impetus," he said.

David Elie, NCC scheme manager, told potential applicants he was looking for specific activities in applications. "We are looking for 'additionality'," he said. "The use of government funds can only be justified if it gets you to do something you wouldn't otherwise have done, or to take a risk."

According to Burland, the timescales involved may have the reverse effect on the product.

"Small companies may be forced to go ahead with their own good ideas themselves simply because they are time critical, and apply for money for second ideas that are always floating around, but you never quite get round to," he said.

Applicants to the scheme should note that grants of one third of the development cost will only be awarded until May 1983, when the proportion drops to 25%.

Accounting for the lost millions at National Enterprise Board

A LINGUIST once said that the purpose of language is not to communicate, but to conceal. He might have been talking specifically about the National Enterprise Board, which recently announced a loss of £56.2 million for the year 1981. But the full consolidated group accounts showed NEB's losses - that is money spent, and for one reason or another irrecoverable - as £44.1 million before tax.

The larger, £56 million figure was arrived at by combining investments and losses, which may make accounting sense, but must only be confusing for the majority of taxpayers whose money is lost or invested by the NEB.

What this appears to mean is that the NEB increased the apparent loss by taking two provisions: One was £12 million for Data Recording Instruments, and the other was a general provision, that is money which may have to be paid later, of £7.18 million against its general investments.

What this accounting fudge has done is to obscure the plain fact that the start-up costs at United Peripherals were almost £32m.

According to the NEB accounts, losses of £10.34 million at DRI in 1980, and further losses of £9.73 million, were primarily attributable to the costs of starting up the joint venture with Control Data Corp at Winsford.

What has appeared for the first time is an additional £12 million of stock write-offs occasioned by DRI's entry into the project.

The fact that so much public money can be spent without any detailed accounting explanation, or indeed advance estimates which would have enabled progress to be monitored, is unusual. According to Sir Frederick Wood, the chairman of the BTG Group which encompasses the NEB, OPL will be in profit in the next year or two.

The accounts also fail clearly to associate investments in the two companies, and the running losses paid, presumably, by the NEB.

Other heavy losers at the NEB were: Immos, £15.11 million in 1981, compared with a £5.78 million loss in 1980; and Nexos the now defunct word processing venture, which lost £13.2 million in 1981 and £9.99 million in 1980.

SCHROF... Used government scheme for high initial borrowings.

Banks too cautious when start-up firms need help

PROFITABLE companies overtrade, but British banks are still unable to adjust their cautious lending policies to meet the needs of new technology start-up companies that are short of cash.

This was one of the messages from the first provincial computer industry financing conference which was held near Reading last week by stockbrokers Heslaine Moss.

The event, in the intimate surroundings of an elegant country club, once again brought together a group of financiers with money to lend to computer companies, and a small gathering of computer companies which had either just started up or were seeking their second round of initial financing.

One measure of the effectiveness of the conference was the departure of one small company representative with a promise of £100,000 from one of the financing participants.

The conference itself, addressed by a series of speakers from both sides of the fence, managed to raise a number of thorny and central questions about financing in the UK.

According to several speakers, particularly from the industry side, one of the major failings on the part of the banks was the inability to adjust to the cash shortage raised by rapid sales expansion. Traditionally, UK banks and lending institutions are very cautious when it comes to funding companies which may be technically overtrading.

In effect the companies are selling more product than can be financed by their cash flow, and consequently a need for further borrowings is created. That in turn may lead to an increase in "gearing" - the relationship between a company's borrowing and its shareholders' funds.

But one delegate said he had never come across a profitable company which did not overtrade. It was the cheapest form of borrowing, letting your suppliers fund you interest free.

The discussion led to a spirited defence of the banking industry's current position by Colin Amies, Midland Bank corporate finance director. He said there was no shortage of funds for companies which were trading successfully.

For a good proposition, Amies said, his bank would always be able to make an offer of funds. A good proposition was one which came with a complete team covering marketing, technical matters, production and finance, with an in-depth knowledge of the market they were entering.

Raul Schrof of Scribe and Naomi Langford Wood of PME, who have recently started up computer companies, were both appreciative of the help they had received from their banks, Lloyds and Barclays.

Schrof said that he and his fellow directors had used the government guarantee scheme to raise quite high borrowings initially.

This enabled them to hold on to all the equity until it, and the company, were worth enough to consider selling some shares for the kind of money which would launch the company into the marketing phase of its development.

A MATTER OF LIFE OR DEATH

When an accident occurs involving severe electric shock, people on the spot may be suffering from a kind of shock themselves. The realisation that one has literally only seconds to save a life can itself be momentarily paralysing.

That's why Computer Weekly's sister journal Electrical Review has completely restyled its Electrical Shock Chart. The new chart, prepared in consultation with St John Ambulance Brigade, highlights the main points in red, and explains and illustrates the actions to be taken so clearly that they can be grasped instantaneously even in a crisis. It also includes vital instruction on what to do if the casualty does not respond to artificial respiration - with a section on external heart compression.

Action this second could save a life. Post this coupon NOW.

VIVID RED AND BLACK. PLASTIC CARD OR PAPER.
SIZE 19 in x 13 1/2 in (474mm x 346mm)

ELECTRIC SHOCK ACT AT ONCE - DELAY IS FATAL

make sure it is safe to approach

If the casualty is not clear of the source of the shock break the contact by switching the off the current, removing the plug, or wrenching the cable free. If this is not possible, stand on dry insulating material (rubber, wood, brick, thickly folded newspaper, books) and try to push or pull the casualty clear of the contact using similar insulating material (such as broomsticks) as a lever. Do not touch him with bare hands.

If the casualty is breathing

Place the casualty in the recovery position and watch him.

If the casualty is NOT breathing

Call medical aid while you:

Artificial respiration - speed is essential

1. Take a deep breath, stuff your fingers, seal your lips around his mouth and blow air steadily into his lungs. Watch his chest rise.

2. Take a deep breath, stuff your fingers, seal your lips around his mouth and blow air steadily into his lungs. Watch his chest rise.

3. Remove mouth and watch chest fall. 4. Repeat and continue inflation at your natural rate of breathing. When casualty starts breathing place him immediately in the recovery position.

Artificial respiration - speed is essential

1. Take a deep breath, stuff your fingers, seal your lips around his mouth and blow air steadily into his lungs. Watch his chest rise.

2. Take a deep breath, stuff your fingers, seal your fingers, seal your lips around his mouth and blow air steadily into his lungs. Watch his chest rise.

3. Remove mouth and watch chest fall. 4. Repeat and continue inflation at your natural rate of breathing. When casualty starts breathing place him immediately in the recovery position.

DATA PROTECTION

Opposition to government data protection proposals is gathering pace... Sociologist Dr Boris Allan airs his views

IT's a brave new world—but the enthusiasm is unrealistic

"New forms of communication, and
access to information, raise ques-
tions about the relationship of govern-
ment to the governed, the
responsibilities of professions to their
clients, and the privacy of personal
data."

Information Technology (1.11)
HMSO 1980

"Though conversing face to face, their
hearts have a thousand miles between
them."

Chinese proverb

INFORMATION Technology
(IT) has fired many with a
touching enthusiasm—unrealis-
tic, but touching. We are told the
world will be a very different place
with the inevitable changes which
technology will bring.

The brave new world assumes
such a change in people and
society that most commentators
who have queried such an inevi-
table change have concentrated on
aspects such as employment, and
are only too easily classed as mod-
ern Luddites—though for a great
deal of the time one gets the feeling
that General Ludd has had a bad
Press.

Such changes will not easily
occur, because the single-minded
advocates ignore far more basic
social and interactional aspects
which cannot be described as irra-
tional.

British governments of all com-
plexions have stood firm on the
need of the State to interfere in the
public's private affairs. When in
opposition, token worries are ex-
pressed about the depredations of
the agents of the State (be it Cus-
toms and Excise, Inland Revenue,
the police, or other more secretive
agencies). But as soon as the oppo-
sition becomes the government,

**MPs could deal
with constituents'
complaints by TV
link from their
offices instead of
through personal
interviews.**

attitudes change. Surely,
therefore, the individual's need to
protect himself against such depre-
dations in key areas of privacy
must be seen to be highly rational.

The 1980 Information Tech-
nology report quoted above con-
sidered this to be an important
question, because as it said,
"Power from the use of informa-
tion, which can now be provided
by IT, is great and there is clearly
potential for abuse."

The report felt that justifiable
fears of such abuse were a major
reason why people resisted new
ways of collecting and handling
data by both government and the
private sector.

In April in the Commons the
Minister of State concerned with
IT, Kenneth Baker, told the
House that the new television ser-
vices proposed in the Cable
Systems report (HMSO 1982)
would "change the fabric of
society". Baker amplified on this
familiar statement by saying that
doctors soon may conduct sur-
geries with patients via television.

One must question whether doc-
tors could realistically hold their
surgeries by television for com-
plaints of a physical nature—how
does a doctor examine a patient
through a television screen?

"Press yourself here, and tell me
if it hurts?"
Baker has been carried away by
his own enthusiasm in the hope of
making his own job easier. MPs
could deal with constituents' com-
plaints in a similar way, by TV
link, from their offices in Westmin-
ster instead of through personal
interviews.

To deal with one's constituents
at arm's length is probably a recipe
for losing the next election.
In his book *Up the Organisation*

(1970), Robert Townsend says that
conflict within an organisation is,
up to a point, a sign of a healthy
organisation: "But keep all the
conflict eyeball to eyeball," he ad-
vises.

By which he means: Do not
submerge the conflict in mem-
oranda.

Today we could say "Do not
distance the protagonists by use of
video channels."

We have had an illustration of
the importance of "eyeball to
eyeball" contact with the ill-fated
Alexander Haig shuttle in his
mediation between Argentina and
Britain: the US government has
available telecommunications
facilities which render the shuttle
redundant.

It is worth noting that one of the
minor scandals of the shuttle was
the tapping of a telephone conver-
sation between President Reagan
and Haig (telephones are televi-
sions without the pictures).

If this had been a face-to-face
meeting, there probably would
have been no such intrusion—to
overhear a conversation by some
telecommunication device is far
easier than to overhear a conversa-
tion in a room.

Haig had to shuttle partly be-
cause the privacy of communica-
tion was easier to assure, and
partly because people like to be
with the other parties to the
discussion.

Another aspect of privacy is that
of data protection, for which
neither of the two main parties of
the Seventies can take any credit.
One of the recommendations of
Information Technology was that
"The government should bring
forward proposals for data protec-
tion legislation without delay."

Recently a White Paper was
published on data protection
which gave the government's
proposals for legislation.

The legislation will not apply to
data that need to be safeguarded
for the purposes of national secu-
rity—an ill-defined term with
worrying precedents. These
exemptions will include some data
needed by the police and other
security agencies but registered
data users who make information
available to the authorities in such
matters will not be required to re-
gister these disclosures.

Some of the information
revealed might be incorrect (as
much of this information is found
to be on examination), so what
redress has the individual?

Breach of the data requirement
principles is to be a civil (as op-
posed to criminal) offence, and
their purpose will be to ensure that
data subjects who have suffered
damage because of the breach of
the requirements governing data
use can secure compensation.

"It is not envisaged that the Re-
gistrar will have any role to play in
relation to civil proceedings, which
will be the responsibility of the
individual who alleges he has suf-
fered damage."

So, yet again, the State has not
taken seriously the right to privacy
of the public. In the State sector,
complaints about data systems,
which allege injustice "caused by
maladministration" can be re-
ferred to the appropriate Com-
missioner for Administration (or
Ombudsman).

This threat is not likely to cause
many public authorities to lose
much sleep. The number of local
authorities who have ignored the
Commissioner's recommendations
is growing.

The Court of Appeal on May 6,
1982 confirmed an order which
allowed the police to freeze the
bank account of an accused per-
son, until that person's trial. This
means that if a person fears the
law, the one place not to keep the
money is in a bank account. In
what is supposed to be becoming a
cashless society, the safest place to

keep one's money—if one fears
the police, or the Inland Revenue
—is in money. With the great, but
unknown, size of the unofficial
economy many transactions have
to be in cash.

Travellers to the US who go
outside the main cities will often
find new insights into the famed
US cashless society. Many such
travellers encounter great diffi-
culty in changing even American
travellers cheques in the more ru-
ral parts of the country—cash is
the normal medium of exchange.

The growth in the US cash econ-
omy is such that in the last 20
years the amount of currency in
circulation has approximately qua-
drupled. This quadrupling is the
equivalent of an annual rate of in-
flation of about 5%.

If, as the data protection propo-
sals seem to suggest, the Inland
Revenue, or Customs and Excise,
can obtain information from your
bank—by law—without your

permission, the implication is
clear.

Privacy is very difficult to en-
sure in a society dependent on
communication devices because
computerised databanks can in-
trude on individual freedom far
more easily than the individual can
on theirs.

In a wired society it is not strain-
ing technology too far to suggest
that while you are watching them
on your console, THEY might
well be watching you. Until gov-
ernments begin to take the prob-
lem of privacy seriously and not
indulge in an international window
dressing, the prospects of a wired
society are low.

Kenneth Baker may want to talk
to his constituents at long range by
television, but a wired society re-
quires the whole-hearted
acceptance of a communications
terminal in the home paid for by
the householder, and needs the
question of privacy at the top of its
list.

HAIG... Had to shuttle because privacy of communication was easier to
assure.

Personal Computer Show
The Pavilion 2-12 Sept. 1982

Price £2,395

The ACT Sirius 1 is the UK's best-selling 16-bit
personal computer and the only one with such a
large choice of 16-bit software—business and
scientific programs specially developed to take
advantage of the high speed
16-bit Intel 8088 micro-
processor at the heart of every
Sirius.

Combine the advanced
Sirius 1 with this faster and
more powerful software and
you can see why more and
more business users are mak-
ing Sirius their number one
choice.

UP TO 896 KBYTES RAM
128 Kbytes of RAM
memory as standard easily up-
graded to a massive 896 Kbytes
ensures plenty of capacity for
fully fledged business
software.

The standard Sirius has
12 Mbytes of floppy disk
storage, with 2.4 Mbyte disks
as an option. And 5 and 10
Mbyte Winchester disk drives
are scheduled for early
introduction.

And built into every
Sirius is an audio decoder, a
revolutionary new facility
that can play back verbal
messages and prompts to
assist non-computer
people get acquainted
with the software more quickly.

NEW 16-BIT SOFTWARE

All the big names in applications software are
on the Sirius: ACT's Pulsar for accounting, Wordstar
for word processing, MicroModeller for financial
modelling and SuperCalc the "spread sheet" program.

The ACT slogan encapsulates our philosophy
of a single source for computing solutions.
ACT products include personal com-
puters—business systems—turnkey
mini-computers—software technology—
computer engineering—consult-
ing and bureau services. The eight
ACT companies are each leaders in
their field and are wholly owned by
Applied Computer Techniques
Holdings PLC, one of Britain's largest
and most successful computer
companies.

ACT (Sirius) Limited,
FREEPOST, Halesowen, West Midlands, B63 1BR.
Or call for details now on 021-501 2284

Plus the exciting SELECT the only word processor
that includes a built-in 90
minute teaching facility.
And more than 100 top
software companies are
currently developing specialist
packages for every business
and profession.

MORE LANGUAGES
The Sirius has Microsoft's
BASIC 86, Interstat or
compiled CBASIC several
COBOLs, three PASCALS and
FORTRAN.

And it is delivered with
the two industry standard
operating systems at 16-bit
level—MSDOS and CP/M-86.
The benefit? Program-
mers are making the Sirius
their first choice computer for
business software develop-
ment.

COMMUNICATIONS
Available NOW are the
facilities required to com-
municate directly with other
computers. Two independent
RS232 ports and parallel and
IEEE 488 ports are included
as standard.

SUPPORT
ACT has a truly pro-
fessional network of systems dealers, hand picked
for its knowledge of the business environment.
Further backing is available by way of a dedicated
Sirius Training Centre, run by ACT and open to all.
ACT SIRIUS 1—THE COMPLETE 16-bit personal
computer.

It will pay to capture those errors early

THE Seventh Principle of Infotecture is: It will usually pay off to discover weaknesses in your proposed design techniques at the earliest possible point in time.

Far too much attention is being paid to finding errors in programs during testing phases and by reading "structured" program texts.

As the TRW Software Reliability Study (North-Holland) showed, this late error-finding approach may be economically unsound. The study traced errors which had been corrected by means of program maintenance, in four large systems, to the source of the error. On the average 62% of the maintenance errors had occurred before program coding had taken place.

In other words, there was an opportunity to capture the design error at an earlier point in the development process.

Capturing errors at earlier stages has obvious management advantages - more freedom to select people, time, and tools to correct the situation. But there is also a clear economic and work-power

productivity advantage in capturing errors at early stages of development.

Studies carried out by IBM on real and large systems, with corroborating evidence from TRW Systems and General Telephone and Electronics (GTE), shows that the cost of repairing an error in system development specification increases by an order of magnitude for each further stage of development which the error is allowed to slip past.

IBM Santa Teresa Labs reported in 1979 that if program coding errors were not caught until after the testing stage the correction costs were 23 times higher than the corresponding errors which were caught during the one stage earlier code inspections. They also reported that errors which slipped through to the field, but which had originated as a coding error, cost IBM 67 times as much to repair as did the same class of errors which were caught at the code inspection stage.

This, by the way, is a powerful argument for the use of Fagan's

inspection at all possible earlier stages of system description: the error correction costs are far lower.

One of the temporary restrictions which IBM Santa Teresa Labs reported to me on extending the concept of strict quality control (stricter than traditional review techniques - as strict as Fagan's inspections) to the many higher level forms of design documentation, has been language. The design language used hitherto has been too unclear to allow the kind of objective "proof-reading" comparison which characterises Fagan's inspection. For this reason IBM has been examining stricter language constructs at the pseudo-code level and within the framework of my Design by Objectives methods (explained in earlier columns) and Software Metrics (Student literature, Lund).

One striking example was the application of one hour's amateur inspection which compared the project leader's "system attribute specification" using software metrics, with the New York Electric

Company's presidential goal for the project. Twenty-two glaring differences were found at this stage.

It is worth throwing on the fire the consistently recorded facts, which surprise most professionals, that (according to IBM studies and others) conventional program testing is only capable of identifying 30% of the actually existing errors, while Fagan inspections are capable of identifying a full 80% of the available errors. Combined with the economic benefit (order of magnitude cheaper to repair), the Seventh Principle of Infotecture looks like a big winner.

The faded scrap of paper said: "The debts are on the window side".

When away from his desk that top left-hand drawer was always kept locked, so when the aged accountant eventually died his colleagues burst the drawer open to obtain access to the source of

contained the source of all his wisdom.

My own mnemonic is to remember that cheques come in as debits on the left of the cash book and go out as credits on the right. In other words, work from right to left as with anything else and just remember that debits are on the left.

That rule is satisfactory as far as it goes, but it does not tell you where the other side of the cash transaction has to be posted. The rule establishes whether the other side of an accounting entry is a debit or a credit, but not what account it should be posted to. Which account we must leave to another day, but Figure 1 shows the ledger the entry should be

made to. The entries are connected by the letters (A), (B), (C) etc to show the two sides of an entry.

For example, the debit entry of cheques received in the cash book is posted as a credit in the sales ledger.

An example of how one man's debit is another man's credit is between the cash book and the bank statement. Cheques received by a customer are his debits. When paid into the bank they are posted as credits to the bank's customers' accounts and that is how they appear on the bank statement.

Cliff Dillaway

DOWNTIME

Whatever happened to System 36?

IBM's small business users have been led up the garden path - and left on the fence. These faithful users were told that they would find in the garden a machine to plug the gap between the existing System 34 and the more powerful, but incompatible, System 38.

This machine, they were led to believe, would be called System 36.

"IBM is being obnoxiously coy about the machine," said a large-scale multi-national user of System 34. "We were led to believe that it would be announced in the first quarter of 1982 but this was deferred to the second quarter because of IBM reorganisation."

Well, the second quarter has been and gone, and where is System 36? Nowhere to be found.

So what sort of reorganisation is this?

Anyway IBM, which prides itself on never talking about any-

thing yet to come on the market, has declined to confirm or deny the machine's existence.

Still, there is some consolation for deserted users of the System 34. Beyond the garden fence lies a healthy young orchard of Japanese plug compatibles. Just give them a year, and they will bear fruit.

Anti-British actions

IT seems that computer users in the British public sector will not be allowed to make up their own minds about which computer to buy when US-owned companies are in the running.

No fewer than three actions are either planned or current against the public sector organisations for choosing a British-made mainframe of distinctly orange origins in orders where the Americans thought they should have the contract.

In one instance IBM is suing, and Sperry Univac is reported to be planning to sue the Severn Trent Water Authority, so presumably Sperry will wait on the outcome of the first action to decide on its own course. Burroughs has its own plans to sue Oxfordshire Regional Health Authority.

The serious side to this business is that of preferential procurement. This is outlawed by the EEC, and that, presumably is why the actions are being brought. However, the English High Court hardly seems to be the place to bring this kind of case.

On the other hand, the systems in question would probably be up for their next renewal before the EEC sorted out the mess. And given the recent performance of some of the claimants, that might be a mile too far into the future for comfort.

White world

THERE is no truth in the rumour that IBM is setting up a sideline in white shirts.

It all began when IBM said it could not provide enough staff to support all its systems in the US. Why? Because there were not sufficient white shirts to go round.

In the US, IBM insists that staff wear white. And come the summer, when sticky necks and smelly armpits dictate that white shirts be frequently changed, shops run out of them.

Especially when all the employees of an organisation the size of IBM wear them.

10 YEARS AGO

From Computer Weekly of July 13, 1972

THE Department of Trade and Industry issued statistics on the UK computer market showing that in the first quarter of 1972 output was at its lowest level for more than two years, deliveries of hardware were similarly depressed and exports were at their lowest since the second quarter of 1969.

A further step towards the computerisation of firearms was taken with the publication of LAMSAC's second report on the subject, which recommended the use of a standard code for specific items common to firearms registration.

The test-tube computer

MY Dad once told a glib little son that we would all be either computer programmers or molecular biologists by the year 2000. I still think he was right.

But how right he was is only just beginning to emerge. For the question is now being asked: When will we have the first test-tube computer?

A molecule that can exist in two states to represent a computer bit of information has already been synthesised in the States. An attempt is being made at Mississippi University to make a molecular diode, to allow current to pass in one direction, but not the other.

One K of such molecular components will, would you believe, fit into a line a micron long!

The romance of words

"A PROPOSED revision to American National Standard X4.13-1971 has been drafted by X3 Technical Committee X3B10, Credit/ID Cards."

Now what the world is this! I shall enlighten you. It is the first sentence of a Press release telling us that the American National Standards Institute (ANSI) proposes to change the format of financial transaction cards. There is no indication what financial transaction cards are being talked about, or why anyone should want to change them.

And does it not strike you what marvellous lyrical names these divisions of ANSI have? There is X3J3, the Portran committee; X3J4 the Cobol Committee, and now X3B10, the Technical Committee proposing a change to Standard X4.13-1971.

What a dangerous job we have here at Computer Weekly, trading gingerly through minefields of acronym, abbreviation, tautology and cliché. I think we do rather well to deliver such a readable paper after all that.

BTG asked to defy gravity

THE problem with the British Technology Group, is not the BTG itself, but the government and the objectives it sets for the organisation. The objectives are reminiscent of nothing so much as the Pushmepullu, that ridiculous animal in the Dr Doolittle films.

The BTG is required to make a rate of return on investment of 13.07%, something the bluest of blue-chip companies find all but impossible.

At the same time it is required to invest in projects that, to put it simply, blue-chip commercial operations would not touch with a barge pole. As if that weren't enough, the group is required to treat its investments as losses in the year in which they are made, but to use the following oblique formula to calculate the profit in the year in which the investments are realised:

$$\frac{\Sigma R + C}{\Sigma C (1+r)^t}$$

Hardly surprising, then, that many of the BTG's senior staff have trouble understanding their own accounts, much less some of the unfortunates required to report these accounts to the public.

Even BTG chairman Sir Frederick Wood put the loss at £56 million for last year, when in fact the group lost £44.4 million.

The first figure comes from what amounts to a subsidiary account, the latter from the consolidated or final accounts of the organisation.

This sort of confusion makes it easy to see why the grossed up start-up costs of the United Peripheral operation in Winsford, £32 million, were overlooked.

But a costly project like that is surely a major computer industry event.

Why have we and the world heard so little about UPL?

And while we are on about it, how can a public body calmly lose £34 million on an operation like Nexos, the equivalent of creating 1,360 jobs at £25,000 each, without anyone calling for some form of inquiry?

On the basis that any attempt to lay blame is futile, do not those who paid the piper - the public - at least deserve to know what lessons have been learned?

This is not to say or imply that the BTG should not make losses, simply that its operations should be far more open to the public who pay for them.

Most of the group's problems stem from the fact that the government is trying to make the organisation defy financial gravity by making a high return on capital in investments that commercial organisation will not touch.

Funding for starters

LESS than a year ago this paper launched the first computer industry financing conference in the UK. Run in conjunction with the merchant bank Singer and Friedlander, it gave entrepreneurs in the industry an opportunity to meet financiers face to face. And last month Computer Weekly and Barclays Bank sponsored another financing conference.

The object of both conferences was to strengthen the links between people and institutions with money to lend, and computer industry companies needing funds. It was hoped that a measure of change might be effected in what was generally reckoned an unsatisfactory situation in relation to the early funding of young companies in the UK computer industry.

If the momentum for change which began at the two national conferences is to be sustained, it is essential that meetings such as those organised by Heseltine Moss last week in Reading (see page 9) should take place around the country.

Getting UK funds behind UK computer companies has wide implications and employment is one of the most important.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by Graeme Hewson of Uxbridge, Middlesex, who wins £5.

The transporter is the brainchild of James director, Iana Barron. It is a microchip consisting of a small central processing unit and a memory storage unit. The advantage is that it can be connected to other chips performing other functions. However it will not be in production until 1984 at the earliest.

LETTERS

Some points on Codasyl database

A FEW important points need to be made about the article by Martin Hammer on a Distributed Codasyl Database (CW, June 17) since there are alternative approaches which need to be published.

Firstly, Hammer's article appears to imply that a single schema exists although it is unclear whether an identified copy should exist at each node. There are many cases of distributed database systems where there is the requirement for a number of different schemas. This is to take account of different functions occurring at different nodes.

The most general way to look at distribution is in fact as a system of co-operating databases each with its own schema and with the need for a management co-ordination function which could be centralised or federal in nature depending on the environment.

Secondly, Hammer has not ap-

plied his ideas to the latest Codasyl specifications which separate storage information from the schema. Several products (ie ICL/DIMS and DEC VAX-11 DBMS) now incorporate such a separation. Following Hammer's approach all extensions could be made to the storage schema. However, this suggests local control of efficiency with geographic storage distribution, the latter involving considerations other than efficiency.

In practice there is a strong case for an architecture which allows a special geographic schema to handle distribution effects separate from both the schema and the storage schema at each node.

Thirdly, there is no need for modifications to the DML to handle distribution. A geographic schema could contain details of distribution in terms of application data item values and current DML could be utilised in like terms. For example, rather than storing a

record, say a customer account record, at a particular node, which would correspond to a bank branch, it would be necessary to identify the bank branch, for example by a data item value in an explicit bank branch record and then the geographic schema would determine the actual node for storage.

These points are based on work in progress of the BCS/Codasyl DDL Data Base Administration Working Group (DBAWG). The current state of affairs is that a schematic architecture is close to finalisation and work is shortly expected to begin on syntax which it is hoped will eventually be considered formally by Codasyl.

A paper on this architecture is being presented at the British National Conference on Databases in July.

Edinburgh Regional Computing Centre.

LANs have their place in the office

I FEEL I must take issue with the closing remarks made about Local Area Networks (LANs) in David Henson's article (Forget the "Paperless Office", It Just Isn't Going To Happen - CW, June 24).

In an otherwise inoffensive piece, he answers some well-worn statements with acknowledged good points, but alas, he concludes by dismissing it, like a spoiled child dismissing the game of marbles as "no good", because he hasn't got any.

Yes, just like any technical innovation, some LANs have their problems, but to suggest that they are responsible for giving office automation a bad name is taking things too far!

Necessity, they say, is the mother of invention, and in the harsh business world executives seeking increased productivity and economy have been forced to move their battlefield from traditional factory and administrative data processing functions to the office environment. As a result they have exposed the financial and operational weaknesses of conventional "one-box" technology.

The simple fact is that, when all is considered, the concept of the LAN is that bit closer to the theory of information processing systems, and while in some cases it is worthwhile bucking the laws of nature to make progress, why do it when you don't have to?

This is not to argue that LANs are the office automation panacea but merely to point out that like

the mainframe computer, the minicomputer, the shared logic computer and the micro, LANs have their place and, if anything, are making office automation more acceptable.

Datapoint is accredited with being the world's leader in LANs, having over 4,000 installed worldwide, 120 in the UK, but there are many other successful suppliers that bear witness to the useful contribution the LAN makes.

Go on, admit it! - marbles can be a rattling good game for all the family!

Great oaks from little Acorns

WE are a children's playground in central London and during the six weeks of the summer holidays we can have as many as 300-400 children during the daytime taking part in our summer holiday project.

Sporting and craft activities are reasonably well covered but there is a zero input of mind-stretching technology because quite simply we don't have any equipment.

Is there anybody out there who has an Acorn or an Apple (or a Cray 1) or something similar who would be willing to lend it to us for six weeks so we could run computer experience sessions?

I should emphasise that we do have access to experienced computer

personnel who are willing to run the sessions; we do have a secure room in which to keep the equipment; and of course we would accept full responsibility for it.

Our summer programme starts on Monday, July 26, and finishes on Friday, September 3. It is aimed at local children of the area and we do not charge for activities if at all possible.

Mapse, Apse and Kapse

IN the article on the government's call for a software initiative (CW, June 24), you state: "A little confusion, to say the least, is caused by the terms MAPSE and APSE".

I would hate to add to this confusion by mentioning KAPSE (Kernel APSE) but would like to point out that, in all the designs I have seen, the database manager is included in the mapse.

However, I would like to suggest that, although "Absolute Programming Systems Environment" is a rather neat expansion of APSE, the US Department of Defence, among others, favours the rather unimaginative meaning ADP (Absolute Data Processing) Support Environment.

Please do not feel that I dislike your interpretation but it may lead to a proliferation of new acronyms like NAPSE (Nearly Absolute . . .) or VAPSE (Virtually Absolute . . .).

Duplicated mail

I AM surprised to read (CW, June 24) that both you and a reader, Boris Allan, of Stockport, think it amusing, surprising or remarkable that any organisation should say: "If you receive more than one envelope . . . hand sorting is more expensive than postage."

He has received £5 for reporting it as a "strange saying"! If you have not received these words with your mail before now you aren't on the same sort of mailing lists that I'm on.

At the risk of stating the obvious: many charities for example have a list of people who have donated in the past and a list of people who have bought Christmas cards. They send out appeals to both lists.

Many firms, similarly have two lists of potential customers, compiled from different sources. It really is cheaper to send some people two communications than cross-reference the lists and remove duplications. It would have to be done by hand.

Have you ever thought what an irregular form a name and address file has? It's quite fun to sort one. The computer could only identify exact duplicates, and not recognise us being the same:

Mr Boris Allan, 13 Acacia Street, Stockport.
Mr B. Allan, 13 Acacia Street, Stockport.
Mr B. Allan, 13 Acacia Street, Stockport.
Mr B. Allan, 13 Acacia Street, Stockport.
Mr B. Allan, 13 Acacia St., Stockport.

To say nothing of Mr B. Allan, 13 Acacia Street, Stockport, which I guess he's been addressed as before now.

I get my name mispelled on at least 25% of casual mail. Don't blame me had handwriting - it's printed in block capitals at the top of my headed notepaper.

(By the way, if any reader wants to write to Mr Allan I made up the 13 Acacia Street - full address was not given.)

Obviously neither the Editor nor Mr Allan has worked with an organisation that was mailing to large numbers of people on more than one list, or they would know for sure that it does cost more to remove duplication.

The only public relations opportunity the Dutch publisher missed was to say: "If we have sent you more than one of these brochures we apologise for any irritation caused and ask you to pass the duplicate/s on to a friend."

JEAN M. K. DUFTY
Sale, Cheshire.

Elegant system

I WISH to correct a possible misunderstanding conveyed in Boris Sedacca's interesting article on Compec North (CW, July 1).

At Delta Data Systems we commend the CPM based Wordstar word processing package to users of our Delta 2000 series of intelligent workstations. Wordstar is available for a wide variety of CPM based microcomputers, many of which have only basic keyboard facilities. Thus operator selected control functions normally require multiple key strokes.

To streamline the use of Wordstar, many of these are now implemented through a single key depression on the Delta 2000 series.

Our opinion of Wordstar is that of an extremely elegant word processing facility which provides useful benefits to users of the Delta 2000 series of intelligent workstations, particularly when in Burroughs, DEC, IBM or ICL networks.

HUMAN TOUCH

One man's debit is another man's credit

THERE is only one accounting joke. It concerns an aged accountant whose wisdom was renowned and who was often consulted by his colleagues. When consulted he always looked at a faded scrap of paper that he kept in his top left-hand drawer and which obviously

contained the source of all his wisdom.

When away from his desk that top left-hand drawer was always kept locked, so when the aged accountant eventually died his colleagues burst the drawer open to obtain access to the source of

Figure 1

FOCUS

Everyone's getting in on the micro act

THE long-standing guardian of the data processing professional, the IDPM, intends to get more closely involved in microprocessing. For a start, the association is calling for greater compatibility in such matters as standard operating systems, floppy to 16-bit upgrading paths and floppy disc equipment.

Surprisingly, the IDPM standard does not cover the major area of disaster, that of micro distributors. Micro outlets include manufacturers, distributors, systems houses, high street stores and even mail order. Before long, Exchange & Mart and NME will probably be featuring secondhand micro sales.

A leading authority on micro retailers, Read-Out Publishing, has estimated that there are already over 1,500 micro stores and

distributors in the UK - a figure which is escalating daily.

The growth is not unexpected, given the forecast of the London Stock Exchange. Brokers Smith Keen Cutler suggest that the present 30% a year growth in microcomputer sales is opening up major opportunities, which even now is not fully appreciated by the public.

If this is the case, then the public must be highly unobservant with micros on display at the local video rental store, chain chemist, book shop and the local library.

Whether the marketing of micros in such establishments is a correct and healthy operation, however, is open to some doubt and disquiet. Are major book shops, which would presumably hesitate to sell domestic vacuum

cleaners or deep freezes, competent to contribute useful micro advice?

In their haste to establish widespread sales outlets, micro manufacturers it seems, have adopted the motto: The More the Merrier. Selection criteria appear to be influenced more by available shelf space than available expertise.

Business user micro awareness levels probably begin when the equipment is being unwrapped and powered-up. Instead of hand-holding, the user finds their hands holding an instruction manual and a soldering iron. That many users would be happy to pay a premium price for a premium service is one which has already been acknowledged by Digital Equipment.

PEOPLE

SPL gets second managing director

RESPONSIBILITIES of the group managing director of SPL are to be shared between Peter Adams, who currently holds the title and David Thomson, who will join the board of Systems Programming Holdings (SPH) as joint managing director of SPL and SPL in September.

Thomson is currently director of electronic and information technology operations at the British Technology Group and was finance director of NRDC and chairman of its CAD/CAM subsidiaries until the merger with the NEB to

form the British Technology Group.

He joined NRDC five years ago and has had a working relationship with SPH throughout the past year, attending its board as BTG representative.

Thomson will take responsibility for finance and commercial activities in the UK and for overseas acquisitions.

Adams, as the other managing director of SPL and chairman of SPL, will concentrate on marketing and the group's overseas operations.

■ Terry Dunn has been appointed Northern regional manager for MSI's Warrington office. He was previously with Harland Data Systems as UK sales executive.

■ Professor Brian Randell, professor of computing science at the Science and Engineering Research Council, has been awarded a grant of about £9,000 to join the University of Newcastle-upon-Tyne's computing laboratory as a Visiting Fellow.

■ John Kinnear and Tony Brewer have been appointed to the board

of management consultancy Butler & Cox. Kinnear is a founder-member of the company, which was established in 1977. Brewer joined the company later in 1977, and in 1980 was made a partner.

■ Elvia Rose has been appointed director of manufacturing at Able Computer in Irvine, California. He formerly held senior management positions with IBM.

■ Peter Dodds has been named sales director at Tandata. He was previously marketing services manager at Rediffon Computers.

■ Brian Smith has been appointed systems director at Sharp Bennett Associates. He was previously distribution consultant with the company, developing bespoke systems for clients.

■ Francis Lorents has been appointed general manager at CII-Honeywell Bull. He has been deputy general manager at Société Lyonnaise des Baux since 1980.

■ Peter Dodds has been named sales director at Tandata. He was previously marketing services manager at Rediffon Computers.

■ Graham Lockie has joined System Industries as sales executive for the Greater London, Kent and Sussex areas. He was formerly a regional sales manager with Vermont.

■ Geoff Leary has been appointed reseller business manager at Prime Computer. He will be responsible for business in the North and Midlands, based at the company's Milton Keynes office. He has been with the company for two years as sales executive in the Birmingham branch.

■ Colin Hendry and Paul Ransom, both formerly with Northern Star, have joined Swiss Reinsurance as database administrator and senior systems programmer respectively.

■ Mike Dixon, previously sales director for United Computing, has been appointed sales and marketing manager at Data Logic.

■ European sales and marketing manager for Computer Resources, has become area manager. Tony Baker, formerly Restart product manager for Computer Resources has been named product sales manager.

■ Tony Russell, previously with Hoskyns, becomes data centre manager and Xenia Gillian has been appointed sales administrator. All these appointments were made to Data Logic's information systems division.

Aim sets up new division

AUTOMATIC Information Management (AIM) has established a general business systems division to handle sales of all the computer systems not specifically oriented to its two vertical marketing divisions: legal systems and medical systems. It will sell systems based on DEC equipment, hand-held terminals and all non-legal and non-medical microcomputer systems.

Left to right in the picture are Paul Tunton, who has been appointed general manager of the new division from his previous post as manager of the microcomputer division; John Davis, formerly in charge of the retail and finance division and now director of the new division; and Steve Wilson who becomes sales manager. He joins Aim from ICL.

■ Dallas Talley has been appointed director and chief executive officer at MDS Quantel, and has been elected senior vice-president of Mohawk Data Sciences. In 1979 as a consultant he established Quantel's international distributor network. He joined the company as senior vice-president in 1980 and became executive vice-president and chief officer two years later.

■ Barry Fuller has joined NSA as a systems consultant. He was previously a systems manager at Coventry Climax.

■ Carl Neun, formerly vice-president of finance at Shugart, has been appointed vice-president for manufacturing-related processes of all eight and 5.25 inch floppy drives. Thomas Gardner became vice-president and general manager of rigid disc division. He previously held a similar post at Memorex.

■ Gerald Kline, previously with BASF, is the new product manager for Winchester disc drives.

■ Len Cornthwaite, managing director of ASBA Ltd since 1981, has been appointed to a new position in the ASBA Group, with responsibility for creating business opportunities in the oil and gas industry. He remains on the company board.

■ Eric Drewery, who has been managing director of its rotating machinery division of Mather and Platt since 1979, becomes managing director of ASBA Ltd and chairman of ASBA Service.

■ Stephen Fishman has been appointed manager, word processing resources, at the Alfred Maths Group. He joined the group as group technical consultant a year ago.

■ Paul Stirling has joined Act as project manager responsible for the implementation of the SCL package in the UK and Europe. He was formerly with Flack Support Services.

■ David Wilkinson has joined Babbage as sales director. He was formerly with the VLI Group when he set up this company's sales and marketing arm.

CONFERENCE

A CONFERENCE on CAD/CAM is being held next June in Cambridge. Organized by the Computer in Manufacturing Committee of the Institution of Mechanical Engineers, the conference is sponsored by the Institution of Mechanical Engineers. The conference is being held in conjunction with the Cambridge CAD/CAM conference and will cover the latest developments in CAD/CAM, including the use of CAD/CAM in product development, manufacturing, and marketing.

PRODUCTS

Modem puts systems online to Prestel

DESIGNED for use mainly with videotex and viewdata systems, public or private, is a new competitively-priced auto-dial modem from Zycor.

Teledex CI enables word processors, micro, mini and mainframe computers to go online to systems like Prestel. In this way access can be obtained to databases, external and internal, or messages exchanged by machines of different standards, eg via Prestel's Mail Box Service.

From the computer keyboard the user can instruct the CI to dial automatically a remote viewdata computer. Once contact is established, data is displayed on his screen and, again from the keyboard, he can interrogate the database.

In tele-shopping and similar applications, a microcomputer connected to Prestel via Teledex CI could automatically work through

the response frames, process the data, print packing and address slips, raise invoices, and even update stock and accounting records, says Zycor.

Teledex CI makes it possible for computers using different communications standards to talk to each other since it incorporates a protocol converter, in addition to auto-dialler and modem functions.

It connects to the office computer system, micro or word processor via a standard input/output port.

"The Teledex is expressly designed for continuous business use yet, at about £400, it is less than the first two years' rental of a British Telecom modem, which does not even have auto-dial or protocol-changing features," claims Ken Williams, Zycor managing director.

Zycor (CW), Gateway House, High Street, Slough, SL1 1NB.

14in disc drive from Fujitsu

A 14-INCH Winchester-type disc drive with 168.5 Mbyte unfformatted storage capacity and 27 milliseconds average positioning time is available from Fujitsu.

The M2284N offers large storage capacity - 832 cylinders with a 20,480-byte unfformatted track capacity. The track density is 680 tracks per inch.

The use of a high-speed rotary actuator results in fast head positioning: 6 milliseconds for track-to-track, 27 milliseconds average and 55 milliseconds maximum, and a high data transfer rate of 1.012 Mbytes per second.

The M2284N is a member of Fujitsu's 14-inch Winchester-type fixed disc drive series, called M228X. Some models have fixed heads for faster access.

They are available with power supplies of either 100/115VAC or 200/240VAC.

Fujitsu Europe (CW), 54 Jermy Street, London SW1. Tel: 01-493 1138.

The TT100 from Trident.

Trident launches a look-alike

FOLLOWING the introduction in March of Graphmate, a free-standing graph plotter, Trident now announces the launch of a DEC VT100 look-alike terminal.

The terminal, the TT100, offers all the features of the DEC VT100 plus substantial additional options included as standard.

The TT100 will sell for substantially less than the DEC equivalent

machine including all additional features, says Trident.

Over 150 TT100s are already installed with major DEC users.

The TT100 will be marketed through Trident Technology, a wholly owned subsidiary of Trident Computer Services.

Trident Computer Services (CW), The Parade, High Street, Frimley, Surrey. Tel: 0276 64252.

TA speeds up the Alphatronic range

TRIUMPH ADLER is adding speed and storage power to its range of Alphatronic microcomputers with the introduction of the Alphatronic P2U. This machine is an upgrade of the P2/64K microcomputer, but includes integral twin double-sided, double-density floppy disc drives to provide a total disc storage capacity of 720 Kbytes. Priced at £2,295 including VDU, the P2U is one of the lowest priced microcomputers in its category.

Adding further scope, Triumph Adler has introduced an IEC bus (IEEE interface) which enables Alphatronic users to link their microcomputer to a wide range of IEEE-based peripherals and instrumentation. The price of the interface now available is £150.

A real time clock option further enhances the use of Alphatronic microcomputers for applications requiring time logging and is available at £70.

Triumph Adler UK (CW), 27 Goswell Road, London EC1M 7AJ. Tel: 01-250 1717.

Tri-density magnetic tape unit

A HIGH-SPEED tri-density magnetic tape drive has been added to the Harris product line. The new Model 6730 features a speed of 125 inches per second and densities of 800, 1,600 and 6,250 bits per inch.

Compatible with the entire current family of Harris' high performance VOS super-minicomputers, the 6730 is cabinet-mounted and includes a formatter/controller unit. This controls both functional and diagnostic modes through a built-in microsequencer. Since the unit is built directly into its own cabinet, there is more space inside than in standard rack-mounted units, providing easy access for maintenance functions.

Price of the Model 6730 is £34,840.

Harris Systems (CW), Information Systems International Division, PO Box 27, 153 Farnham Road, Slough, Berks. Tel: (0753) 34666.

The Telex Interface Unit.

Intelligent telex store

AN intelligent data buffer capable of connection to the telex network has been launched by AIS (Communications). Called Datastore, the equipment has a 32K store which can be divided into six 54K individual units to be used separately or together.

This means that it can be used for several different functions at once.

ATS (Communications (CW), Bridge Road, Haywards Heath, Sussex RH16 1UB. Telephone: (0444) 41911.

Autonomy for office

A RANGE of modular bank terminals designed to provide new levels of autonomy for branch offices has been announced by NCR.

Called the NCR5000 series Branch Automation Systems, they use 16-bit Motorola 68000-based controllers capable of supporting a variety of activities at once, including word processing, data entry and programming in Cobol, Pascal or C.

Up to 32 visual display units or printers can be connected to the largest of the three controllers in the range, the £5,500 5094, via a 48 Kbit-per-second lightweight telephone cable up to 12,000 feet

long. Sales manager Andrew Chard said a typical two-cashier bank or building society branch could be equipped for £8,000 and a four-cashier branch for £12,000. The controllers would also support NCR cash dispensers.

The systems will be made in the US, but will be available both in the UK and the UK in the autumn. One of the first pilot test sites will be the Chelsea Building Society early next year.

NCR Ltd (CW), 206 Marylebone Road, London NW1 6LY. Tel: 01-388 8244.

SOFTWARE MONTH

MILLS... Believes in payroll commitment to customers.

Payroll package buyers must be prepared for maintenance costs

THE mainframe payroll packages are well established and there are a few dominant suppliers. Below the mainframe level there are many payroll products on offer - most, but not all, tied in to just a few makes of computer or operating system. Doubtless the micro-mini marketplace will gel like the mainframe market and the introduction of statutory sick pay will be a catalyst to the suppliers.

The leading mainframe payroll package suppliers and a sample of suppliers for smaller computers are listed on page 23.

The market leader in mainframe packages is Peterborough Software with its Unipay package. Peterborough Software is British software house specialising in related applications packages. Managing director John Mills believes in a payroll commitment to its customers and says: "We supply a continuing service on a rental basis. We have to be in the habit of selling ourselves to all our customers all the time."

Perhaps that is why we are Number One.

Pushing Unipay hard in the marketplace is MSA with its Q-pac payroll system. Q-pac, which is of South African origin, has been in the hands of three different suppliers in the last 10 years and this has not done its market image any good.

Don Schmitt of MSA says: "Q-pac has a leading position in the marketplace because of the overall flexibility of the package linked with the obvious advantages of a company supplying a full range of integrated financial systems who, in turn, are the owners of the software they market and not merely agents."

The third package in line is the PPL-Cyborg system. The product is based on a US package that has been modified by PPL using the experience it gained while responsible for marketing Q-pac. Its success supports the belief that the important ingredient in package development is product and market knowledge rather than some intrinsic power in the products themselves.

Tim Southern, PPL's managing director, says: "Our late start has enabled us to provide a modern system using today's techniques which provide the facilities the market needs in the Eighties and consequently we are taking customers off our competitors."

Last, but by no means least, is K-Pay offered by KCS. K-Pay is different in kind from the other packages described below. Managing director Geoff Knight, whose name provides the K in K-pay, says: "There is a tremendous demand for online file maintenance and batch running of payroll. Our product meets this demand on a range of many minis up to the largest 360s."

Unipay, Q-pac and PPL-Cyborg are parameter-driven systems. Users each have the same programs and specify their requirements by means of parameter or control statements. The three competing systems are continually leapfrogging each other with enhancements so that the capabilities of the systems are tending towards being roughly equivalent.

It is hard to find a well-established facility in any of the three systems that cannot be closely matched by the others. There is a strong inclination on the part of each supplier to provide an enhancement to plug any gaps that are revealed when a sale is lost.

K-pay has only a small amount of parameter control. For requirements outside the coverage of the parameters KCS will provide a source code module. KCS is organised to supply and support these modules to run on a wide range of computers and also to provide an ongoing support and maintenance service. The price of the KCS package is likely to be lower than the other packages mentioned and the possibility always exists of users being able to be involved in the source code maintenance.

Below the mainframe level there is a wide choice of software available and prices are just as varied. If a computer is being acquired for the purpose of payroll, then it is

advisable to choose the software first. Ian Duffy of Wisbech Computer Services, a payroll specialist company, says: "We are providing mainframe equivalent facilities on a CP/M micro as a standalone computer for the payroll department. It is very attractive for them to have their own machine under their own control."

For those that already have a computer, trade sources will lead them to the packages they can use. One word of warning: Statutory sick pay could require as much file space per employee as is required for all other payroll purposes. On small computers this will reduce the number of employees that can be handled.

There are so many payroll packages for small business computers that finding which one is best for you is well nigh impossible. Price is no guide at all. The good package going for volume can be cheaper than the piece of rubbish with owners having exaggerated ideas. The market has not been active long enough for a price profile to emerge.

To make your selection modify the strategy given on page 23 and expect to have to get two or even three packages paid for and working before you settle on what suits you. Keying in the names and P45 data for even 300 employees is not too big a task and actually using a package is probably cheaper than spending a lot of time trying to make the right choice by abstract thought.

Find out whether the maintenance offered will be adequate. The surest test is a commercial one. The regular maintenance income from a reasonably-sized user base is a commercial asset. Whichever disasters befall the package's proprietors, someone will acquire that commercial asset and your maintenance service is assured.

Expect to pay 25% for payroll maintenance as against the more usual 10% for accounting systems. Package maintenance usually involves the distribution of complete new copies of the program to all users and, surprising as it may seem, will often be necessary four or five times a year. Take out a maintenance contract and bring the new programs into use when they arrive.

The introduction of statutory sick pay will have a significant impact on the supply of payroll packages. It will stimulate an interest in personnel systems to which it is related through the recording of employee absence data. Personnel systems have implications for data protection with a desire to lock the dedicated computer up in a secure room or, perhaps, put it under the security protections offered by an outside bureau.

Payroll will never be the same again.

SCHMITT... Q-pac's market image has suffered.

You make your system work. Our Productivity Tools make it work harder.

The human resource of the Data Centre is just as crucial as the hardware and software resources. Our range of **Productivity Tools** helps Data Centre managers deal with the problems which interfere the most with the efficiency of large data centres: the shortage of personnel, slow machine response times, and the difficulties associated with getting access to necessary resources during normal business hours.

Our products help streamline your operation and increase your programmers' productivity.

SCREENFORM (Interactive Screenformatting System)

SCREENFORM is an on-line facility designed to create and maintain screen formats for TSO and IMS applications through automatic generation of MFS macros for IMS/DC screens. SCREENFORM provides a simple manner of defining screen formats which is convenient for the user in a 3270 screen environment. Thus time and cost savings in coding and testing.

TSA/PPE (Total System Analyser/Problem Program Evaluator)

Enhances the performance of both system and application program modules. TSA analyses and reports on CPU utilization so that inefficient coding techniques can be quickly identified and corrected. The PPE feature is

then applied to those programs and provides a detailed analysis of the actual code efficiencies. The results are better overall systems performance, response times and user service levels.

JCLCHECK for complete validation of JCL

JCLCHECK is a systems utility that provides dramatic savings of both CPU and personnel resources by identifying all job stream JCL errors and many run-timeabend situations before test or production runs. JCLCHECK speeds production turnover and saves personnel time.

TONE (Interactive Programming System)

TONE is a high performance interactive time sharing system for use with the OS/VS1 operating system. TONE is designed to extend the availability and effectiveness of the computer system, at the same time reducing overhead by utilizing BTAM for its implementation. TONE is fully transparent to IBM's Time Sharing Option (TSO) for MVS. TONE provides better response times and reduced wait time on terminals.

FSO (Full Screen Output)

FSO provides the 3270 display terminal user with a set of extremely powerful and flexible commands to conveniently review spooled input and output and to determine the status of all jobs in the system. More than 70

commands are available to the system programmer.

Our **Productivity Tools** form part of our range of software products including **Capacity Management** and **Information Management**. Our products allow you to effectively increase the amount of CPU resources available without having to invest in new and costly hardware add-ons.

To get the utmost out of your system just clip the coupon and we will send you comprehensive technical information or, if you prefer, arrange a product presentation.

The European Software Company Harder Working Software

The European Software Company Ltd. Kingswick House, Sunninghill, Berkshire SL5 7BL - England - Tel: 0990-23491. Telex: 848980. LONDON DUBLIN DUSSELDORF MUNICH PARIS THE HAGUE STOCKHOLM MILAN ROME

SOFTWARE MONTH

There's only one way to get to know a package — use it!

IT IS a common experience to realise that you are really only just getting to know a package after you have been using it three months. It is by no means unusual to give up a package after six months having finally come to the conclusion that it is not capable of meeting one of your basic requirements.

This persistence is in part caused by an unwillingness to accept defeat, partly because of an unwillingness to accept that the wrong choice was made, but mainly because of the near-impossibility of appreciating what a package can and cannot do in a short evaluation period. There is a lot of interaction in a package and it takes practice, experience and learning to get the hang of it all.

At most of the problems drop away during the learning period, we all live in hope of it coming right in the end, but sometimes it never does.

Checklists and formal selection procedures are essential to ensure that you are not buying a package from someone about to go out of business, who does not own the copyright anyway and whose training courses are given only in Greek. At a practical level, you need to know if the package really does what you want, and can you get on with the support personnel?

This last point does not usually

appear on the checklists. But it is not unknown for companies to get phone calls requesting that certain support personnel are not sent again, in case particular individuals get thrown down the stairs.

Ask no names: the individuals concerned are now both managing directors of software companies.

The practical problem is this: How do you get to know as much about a package in a three-week evaluation period as you might otherwise learn in three months of use? There is only one answer — use the package. Set yourself a target of at least six demonstration payroll runs. Keep your intention from the salesman until after you have trapped him into saying that his package is easy to use.

A demonstration payroll need only consist of six employees. Each demonstration employee can be an amalgam of the three employees with the most complexity on your payroll. Use their live data, choose someone else's surname and pick the forenames from someone else again. You do not have to invent test data if you confuse the origins of the real data you use.

Collect this data before you ever meet the package salesman and run it through your existing procedures and programs to obtain the test results. There is no point in doing work that the computer can do for you.

Until your payroll data has been run through the package(s) you are considering, the time you spend with the payroll package salesman and his support analyst is not entirely productive. You need to learn about his package in relation to

your data. The salesman has his concepts, philosophy and nice neat payroll example to sell. Not uninteresting perhaps, but not quite what you want to learn.

We all learn things in relation to what we already know, so starting with your own familiar payroll data just means that there is not only a base on which to build, but less to take in. These remarks are more applicable to payroll than systems people, but nevertheless have some relevance to all learning situations.

Ideally, and if you have time, set up a demonstration payroll on more than one package. Setting up a package yourself involves such close working with the supplier's staff that you will find that human relationships begin to cloud your objective judgment. Give due weight to your natural prejudice in favour of the first system you set up.

Find out how much depth of support there is at the supplier you are working with. Judge how well

ing he is to allow you to build up confidence in what he is selling by means of a demonstration.

Surprisingly, some suppliers expect you to spend tens of thousands of pounds on intangible software that you have only been able to understand conceptually.

If the software is priced at £250, you must expect to pay first and try out afterwards, and there is a considerable risk of not getting your money back if the product is not to your satisfaction.

The initial purchase price is not the only cost you are going to incur with your new payroll system. Your own costs can be significantly affected by the ease of use and general efficiency of the package you buy. Remember that your costs arising from the use of the package are many times greater than what you are going to pay the supplier, so seek fine tuning and efficiency possibilities that you can use in the years ahead.

Having identified the points that you like, make sure that they are

referred to in the contract. Do this by having the demonstration payroll as well as other documentation referred to in the contract and

strike out any "entire agreement" clauses. You cannot expect damages if the software package does not turn out to be what it was sold as, but you should at least get your money back.

Having bought a package, stop fighting and put your efforts into making it work. There are two tasks facing you. Setting up the control or parameter information to suit your convenience and then setting up the employees on the master file. One of the more important tasks is to get the package to work.

"Is your payroll system this healthy?"

Your payroll is the most changeable and emotionally charged system within your organisation. And if that wasn't enough the government is now imposing statutory sick pay, and who knows what else is just around the corner.

You need an on-line payroll and personnel system that is going to expand to meet all your requirements during the forthcoming years, and at no extra cost. The MSA system has been developed as the most flexible and user friendly on-line payroll and personnel system available today. It is also available with printed reports.

All payroll changes can be incorporated without involving the DP department or re-programming the system. And talking of

changes, the one thing that won't change is your payroll routine. The MSA system is capable of meeting all your existing input and output requirements.

If you would like further information, or would like to attend one of MSA's free seminars then simply complete and return the coupon.

MSA invests over one-quarter of its turnover in development to ensure that your payroll is always correct. Can you afford not to know more?

SOFTWARE MONTH

MANY people are hoping to find fame and fortune by selling a program they have written. If you are one of these aspiring vendors, be sure that you are familiar with the two big differences between a piece of customised software and a program product.

Dennis Vohs, in charge of software development for financial applications vendor MSA, explains the first difference: "Writing software which reflects the needs of a single organisation at a particular time is utterly different from writing software which will be able to service a wide variety of organisations over an extended period."

"For example, if you are de-

SOFTSELL

veloping a payroll system, you have to take into account all the different possible ways of making deductions from employee pay cheques... It is a very hard task to allow for them all. Packaged software has to be far more flexible and general than custom software."

The other major difference lies in the key role of support and maintenance for the vendor. As Bob Goldman, responsible for development at DBMS vendor Culli-

The kind of program that can be brought to market...

nan explains: "The question of ongoing support and enhancement is absolutely crucial."

"Bug fixes and new features have a very strong tendency to reduce software quality and ultimately destroy it, and given the fact that a package is continually being altered, it is important to plan for change in product design."

To handle these problems, package developers have to spend a lot of time at the design stage - far more than is required by customised software. A great deal of thought has to go into all the possible ways the product can be used, and how it will evolve over time. In addition, major efforts have to go into documentation.

For most customised software, documentation ends up being a last-minute, low-budget affair, but for software packages, it generally requires about as much effort as the actual coding and debugging. In other words, if all you have got

is a debugged piece of code, you are still miles away.

So what is so social about a software package? The remainder of this article looks at the kind of program that is capable of being brought to market.

Parameterisation. Wherever possible, anything likely to be changed - whether by the vendor implementing enhancements, or by users tailoring their own environment - should be capable of change without alteration to the code.

Such software is often called "table-driven". So for example programs should contain list-processing logic instead of explicit search instructions such as:

IF EMPLOYER-CITY = LONDON OR EMPLOYER-CITY = WASHINGTON THEN DO SPECIAL-PROCESSING.

By writing software in this way, alterations can often be made by

simply adding a new element to external data structures, without necessitating any program modification.

Isolate sensitive code. If danger areas cannot be parameterised, perhaps for efficiency reasons, or compiler limitations, the sensitive code should be isolated into separate modules.

These can be separately compiled modules, separate source code modules read into mainline source code at compile time, functions or procedures within a source module, or simply instructions surrounded by a lot of warning comments.

However the isolation takes place, it should be done so as to make future maintenance and enhancement as easy and natural as possible.

Development Tools. By the use of high-level, user-friendly development tools such as report writers and CRT screen format-

ters, packages are made far more flexible. Future enhancements are often made much easier to implement. If the tools are made available to customers, a far more tailored environment can be developed without draining the vendor's support resources.

Provision for Error Handling. When bugs occur in packages, support staff need to be able to locate their cause. Various things can be done to facilitate this, such as the use of good general purpose error handling routines, and the incorporation of debugging routines to be activated either dynamically or by setting a compile-time switch.

When the bug has been fixed, corrections may have to be made at many different sites, so it is important to give thought to how this can be done most economically.

MSA, for example, supplies its customers with a module librarian, and many companies leave unused holes in their executable programs to allow for the insertion of error correcting patches.

Locode. Documentation. Clearly, since the original developers may not be supporting the package, code needs to be very well commented. All groups of instructions - whether a separate compilable module or a function or procedure within such a module - should contain a heading explaining what is being done, the inputs and outputs, and interactions with other components. Lines of code should be commented throughout to make them more understandable.

Internal Documentation. A successful product will have to be maintained by new staff, possibly of average ability. So clearly good internal documentation must be written. There is no set formula for this, but it should be well organised, readable, and contain tutorial sections for those unfamiliar with the product.

Generalised Terminology. Different organisations have different terms for what amounts to the same thing, and where possible terminology should be used which is acceptable to all parties.

For example, when describing organisation charts, MSA refers to "the lowest level of your organisation" and "the next highest level of your organisation" instead of "department" and "division". This principle applies to computer terminology as well as applications, and many systems software vendors in particular make the mistake of introducing gratuitous jargon.

It is unwise to attempt to impose a vocabulary on your customers.

Ferris is a consultant in the UK and US providing marketing and planning advice to computer vendors, particularly in the area of software.

success of the product depends in large part on how well they do their job.

Sales Role. When buying a package, many prospects find that listening to the glowing praise of salesmen and reading the effusive descriptions of glossy sales brochures just isn't enough. So they ask to inspect the user documentation, and authors should bear this in mind. It is often necessary to insert a sales-type introduction in reference manuals. These are frequently referred to as "concept and facilities" sections, when a more accurate title would be "disguised semi-detailed sales brochure".

Internal Documentation. A successful product will have to be maintained by new staff, possibly of average ability. So clearly good internal documentation must be written. There is no set formula for this, but it should be well organised, readable, and contain tutorial sections for those unfamiliar with the product.

Generalised Terminology. Different organisations have different terms for what amounts to the same thing, and where possible terminology should be used which is acceptable to all parties.

For example, when describing organisation charts, MSA refers to "the lowest level of your organisation" and "the next highest level of your organisation" instead of "department" and "division". This principle applies to computer terminology as well as applications, and many systems software vendors in particular make the mistake of introducing gratuitous jargon.

It is unwise to attempt to impose a vocabulary on your customers.

David Ferris

Getting to know the payroll package

From page 23

portant reasons for the demonstration payroll is that it gives you a base on which to build your operational system.

If you have set up a demonstration payroll on more than one package you know quite a lot about your requirements. All those requirements have to be expressed in the terms of the system you are setting up. Check out what you have set up with three or four pay period runs of employee data. Create an employee master file for the new package by creating literally thousands of input records from your old master file.

A quick and dirty program for this once-in-a-lifetime job will be adequate. Tune the quick and dirty program so that it will always create clean input for the new system. Carry out systems tests on reasonable numbers of employees and then you are ready for parallel running.

Parallel running has two test objectives that can be kept separate. The first parallel running objective is to see that the calculations and totals are all correct. Achieve

this objective by converting the old employee master file and input data again and again each pay period. Totals between the old and new systems are then directly comparable.

The second parallel running test objective is to see that everything correctly carries forward from one period to pay period. This objective can be met without the necessity to reconcile with the old system. If you try to combine these two test objectives, you are endlessly involved in manually correcting every error you find and then finding the errors you have made in the manual correction.

On April 6 1983, or when you are ready (whichever comes first), cut over to your new system. Have a disaster plan ready that is a bit more highly developed than a contingency plan.

The time to watch is the second run of the new payroll system. Somehow it seems the problems always arise on account of some failure in the carryforward information, so make sure that your tests are adequate in this area. And good luck.

Micros have been nibbling at edges of DP empires - managers fell in love with their ease of use, says Malcolm Peltu

Why batch accounting will soon be seen as a deviation from the norm

Systems like the IBM 4300 are signalling the end of the first wave of commercial DP, which has been characterised by batch processing controlled by central DP departments.

The 4300 kind of system places large-scale computing power directly in the hands of end users and makes online the natural way of computing.

By 1985, batch processing will be regarded as a deviation rather than the norm. Online will be the standard computing environment with batch as an option, rather than vice versa.

The 4300 is proving to be a major weapon in breaking down one of the last bastions of batch processing accounting. Historically, financial and accounting tasks were the first to be computerised in most organisations.

They are therefore rooted in the batch techniques which characterised early commercial DP.

There is, however, nothing about accounting which makes it intrinsically batch oriented. Even a function like payroll, which has a clear batch element, should be viewed as part of an online database inquiry and updating service.

The real breakthrough in end user computing was achieved by micro and personal computers. Interactive working is the norm for microcomputers. Their low cost and ease of use enabled many people, for the first time, to lay their hands on a computer.

The 4300 will stimulate use of online accounting on mainframes as users become aware of the benefits.

Many managers allowed their frustrations with the costs and delays of traditional batch DP to erupt into a love affair with micros. Combined with software like VisiCalc and MagiCalc, which provide basic financial analysis facilities in the form of "electronic worksheets", microcomputers enabled managers to perform many accounting and modelling tasks immediately and on their own.

Microcomputers are now enshrined as an important part of most computing services. But they have been nibbling at the edges of DP empires. With limited data storage, database management and communications facilities, micros are suitable only for tasks with limited, discrete requirements.

What hooked the managers was not so much the microcomputer itself but the immediacy, responsiveness, ease of use and added efficiency which it provided. The IBM 4300 and its competitors provide all these aspects, plus the large-scale data handling and communications need required by medium-sized to large organisations.

The typical user of a 4300 regards it as an online tool for direct use throughout the organisation. Accounting and financial requirements form a key part of the benefits expected from any computerisation project.

The user will therefore expect general ledger processing, payroll, financial forecasting, accounts receivable and payable, stock control, financial modelling, fixed assets monitoring and other accounting tasks to fit into the standard online environment.

This is different from the traditional expectation of users in a batch environment. For purely

historical reasons, accounting became associated with batch processing because DP started as outgrowths from finance departments.

When cost effective online systems began to become more available in the last five years or so, organisations tended to focus them on new applications rather than disturb their well-oiled batch accounting systems.

The 4300, however, has made a major psychological difference. It will stimulate greater use of online accounting on mainframes as user departments become aware of the benefits of interactive access to large volumes of financial and other data.

The benefits of online accounting are indisputable: ●Accurate answers to timely information. The user has direct control over updating and accounting information in the accounting system.

This means information is more accurate and responses can be given immediately to inquiries from this up-to-date source.

●Reduced need for professional DP staff. Using systems like MSA's Easy-Screen to produce screen formats and do online calculations, the users can do many routine DP applications tasks themselves.

●User commitment and control. Provided the online system can be used by accountants and others without special training, these users will take personal control over the operation of the system.

●Fewer printed reports. A great deal of information will be received by the user directly on the screen. Where printed reports are needed, the user can decide how much is printed and in what format.

●Efficient system tailoring. With appropriate software aids, the user can tailor the system to local needs, say with a particular format for a report, various languages for screen formats and so on.

For users, these operational benefits are obvious. There are also great advantages for DP professionals, although there will be some cut in the demand for some applications programming functions.

For computer professionals, one of the bugbears of commercial DP is the pressure from users for relatively simple routines which can be boring to implement. With appropriate online systems, the user will get off the backs of DP staff for work in the more boring type of applications coding.

The staff released in this way could move either into business systems analysis or systems software development. Either way, these jobs are likely to be more interesting. And DP management will be able to deploy available skilled resources to tackle the tricky tasks of establishing distributed computing networks and database systems.

An online accounting service depends on a number of diverse applications in many locations being able to interlink with each other and with shared information bases. A branch office, for example, may have a requirement for a self-contained small computing facility with occasional need to interface with the corporate information service.

For the end user, the same screen will be used as a window on to all accounting systems. It is therefore important that there are automatic interfaces to the modules that make up and integrate services via an easy-to-use mechanism. In addition to smooth integration of the variety of systems

needs, it is also important to have software and networking tools which enable a diversity of hardware to be interlinked.

The computing resources in an organisation could now comprise a mix of mainframes with online terminals, smaller systems like the 4300, down to baby microcomputers. Local and corporate accounting requirements could encompass all these machines as well as many different accounting applications.

So, although the capability for online accounting is available now, it will still take a few years before online finally inherits the DP world.

How far would you go for the best IBM opportunities?

To answer this question you would need to know of the excellent salary, recreational facilities and career development opportunities offered by our client. You would have to appreciate the fine opportunity offered in an advanced IBM environment where your skills are rewarded tax free. Probably you would need to know where it is. However:-

We would like to hear from IBM experienced analyst programmers offering strong PL/1 in a variety of application areas. You should be educated to at least HNC level (for visa purposes) and be prepared to take the position on a bachelor status with regular return flights to Europe.

Interviews will be held initially 3138 miles away in London at Capp's offices within a few days of this advertisement's appearance. You probably have a few more questions that you wish us to answer. The country? It's SAUDI ARABIA.

For further information and an application form please telephone (24 hour answering service) or write to Nick Foulser quoting ref: CW 115-2F. YOU COULD GO FAR!

to C. £22,500 tax free
3-5 years systems and programming experience preferably working on financial and administrative applications in an IMS environment. Experience of SPF/TSO would be a great advantage.

MATERIALS CONTROL - SENIOR PROGRAMMERS

to C. £22,500 tax free
3-5 years programming experience with strong knowledge of PL/1, IMS DB. If in addition to these basic requirements you can offer Cobol, TSO or MARK IV we would be very pleased to hear from you.

ENGINEERING SYSTEMS - ANALYST/PROGRAMMER

to C. £22,500 tax free
For the more technical person offering more than 3 years experience of PL/1 and Fortran, probably educated to degree level in a technical subject. Engineering programming experience is essential with graphics or simulation being desirable.

The Computer Board and Research Councils

Joint Network Team

Applications are invited for a post in a small specialist team co-ordinating the expansion of data communications services in the University/Research Council community.

- The team's work includes:-
- planning a community-wide hierarchy of interlinked local and long-haul networks.
 - the development of communications components such as packet-switches, high speed local networks, terminal concentrators and intelligent network adaptors.
 - the specification and implementation of protocols for Open System Interconnection.

The post offers the opportunity to participate in a variety of stimulating projects in the rapidly growing field of Information Technology.

Applicants must have technical knowledge and experience of direct relevance to the team's work. The post involves some travel.

The team is based at the Rutherford Appleton Laboratory of the Science and Engineering Research Council. The appointment will be in the Higher Scientific Officer grade within the salary range £6,840-£9,126, depending on age and experience.

Some assistance with expenses incurred in house sale/purchase may be available.

Applicants should contact the Recruitment Office, Rutherford Appleton Laboratory, Chilton, Didcot, Oxon OX11 0QX. Tel. Abingdon (0235) 21900 Ext. 510, quoting ref. VN071.

Closing date: 6th August, 1982.

(0212)

SOFTWARE ENGINEERS ARE YOU IN AN UNENDING LOOP? THEN ESCAPE!

You recognise the problem - you make a bright start, but then 'n' years of experience begins to mean one year's experience repeated 'n' times.

If your career seems to be closing-up, then it's definitely time you made a logical jump and branched out into a more progressive route. The escape point? A phone call to Marconi Space & Defence Systems - TODAY, FRIDAY or MONDAY.

01 954 1364

We're a company producing some of the world's most advanced military electronics systems, essential products, vital to the freedom we all enjoy. Right from the start you'd be working on software with a challenge, software that defines the very tactics of the product, as well as producing simulations by which those tactics and the overall performance can be defined.

You'd be producing user-friendly development systems for the very latest technology mini computers, to give the best possible back-up to other teams working on the project. Above all, you'd be enjoying the stimulus that comes from involvement with

some of Britain's leading hardware and software specialists, in a company that provides not just exceptional facilities, but equally exceptional promotion and career advancement prospects.

If you're a man or woman with a degree and at least 2 years' experience in real-time software development, why not put it to the test by talking direct to some of our Senior Software Engineers.

Phone TODAY, FRIDAY or MONDAY anytime up to 6.30 pm on 01-954 1364. If you can't call, write with brief details to: Bill Seton, Personnel Manager, Marconi Space and Defence Systems, The Grove, Warren Lane, Stanmore, Middx, HA7 4LY. Tel: 01-954 2311.

University of London Computer Centre Programmer/Analyst in User Support

The University of London Computer Centre is a national centre and provides a computer service to the University of London and to Universities in the South East and South West of England. The Centre is currently equipped with Control Data 7600, 5800, 6400 and Cyber 72 computers and supports a large communications network of remote batch and keyboard terminals.

An exciting development programme which includes the substantial replacement of existing equipment is already in progress. An Amdahl 470/V8 computer has been installed, a Cray-1 will be installed in 1983, and work is well advanced on the development of a new telecommunications system.

The User Support Department is the main interface between users and the computing service, and provides advisory, documentation and user education services, compilers, graphics and applications packages and libraries.

A programmer/analyst is required to join the team currently engaged in the provision of the Advisory, Documentation and User Education Service. Applicants should preferably be graduates or postgraduates with a keen interest in the provision of user services, and have the ability to communicate clearly.

Salary will be commensurate with age, relevant qualifications and experience on scales £5,284 to £10,675 (under review) plus £1,035 London Allowance.

Further details and application forms are available from the Assistant Secretary, ULCC, 20 Guilford Street, London WC1N 1DZ. Telephone: 01-405 8400.

Applications close two weeks from the date of the advertisement.

TRIDENT COMPUTER SERVICES PLC

Licensed by the D.O.E. as an Employment Agency & Employment Business SE(B)148

ROLFE & NOLAN COMPUTER SERVICES P.L.C.

the ultimate in DEC timesharing systems

• 5x PDP 11/70 • VAX 11/750 • PDP 11/44 • RSTS/E • VMS • RSX • BASIC+/+2 •

• 7 Mb of core • 2500 Mb of on-line storage • 2 computer centres in the City • On-line to 100+ clients in 8 countries •

Rolfe & Nolan Computer Services plc is one of the U.K.'s fastest growing timesharing bureaux - followers of the Stock Market will have noticed their share values very nearly double recently, after yet another record year.

Acknowledged leaders in the field of providing d.p. services to Commodity Brokers, they have also expanded into new applications areas and now offer a comprehensive range of commercial timesharing systems based on the latest DEC hardware and software, including:

commodity accounting; payroll; stock and production control; general accounting systems; financial modelling; word processing.

With further expansion planned, they now wish to appoint two experienced Programmer Analysts to become involved in all aspects of the design, development and implementation of complex interactive systems, liaising with and supporting the company's clients.

Two Senior Programmer Analysts £10K — £12K

In addition to a high level of self-motivation, you should have:

- Sound academic qualifications
- At least 3 years' experience of DEC BASIC+ or BASIC+2
- In-depth knowledge of either RSTS, VMS or RSX
- Strong commercial applications experience

The company has much to offer - varied applications involvement, promotion and salary reviews strictly on merit, an informal but professional working environment and excellent prospects to move towards project leadership roles.

Initial interviews will be conducted in London.

Compucorp Comms. Support Specialist (International Travel)

Berks. based starting salary £13,000 - £16,000

Compucorp is a market leader in the manufacture and supply of Word Processing and Data Processing systems to the world market. Their international support group, based in Slough, Berks, provides pre and post sales product support to distributors and agencies around the world except for continental America.
The group provides product support and specialist applications support. Each member of the team is responsible for a particular specialist subject. The communications specialist will be responsible for advising and assisting distributors' technical staff on a wide range of communications topics.
These will include the usual asynchronous and synchronous telecommunications protocols, wide area and local area networking and communications interfacing. Candidates will be software orientated with a good understanding of the hardware involved.
There will be an occasional requirement for developing specials for clients which will require a good practical implementation ability.
The company offers 20 days annual holiday, free life assurance, BUPA and relocation assistance where applicable.

Apply in confidence to Terry Horley by sending personal and career details, or contact him for an application form, evenings Gt. Missenden (02406) 4705 or daytime as below.

ADVANCED TECHNICAL SERVICES

TELECOMMUNICATIONS EXPERTS

UP TO £20,000 INCLUSIVE

SWITZERLAND & ITALY

Our client, one of the foremost telecommunications companies in Europe, are looking for a number of people to work either in Switzerland or Italy. To qualify for a position in Switzerland you should have several years of in-depth telecommunications expertise in quality assurance or similar, preferably on Vax equipment. You must also speak fluent German. To work in Italy you must have had experience of either ITT System 12/40 or network 2000. Systems engineering experience on either of these machines could be useful. Italian is not necessary in this case. These are super opportunities to widen your experience and gain the benefits of working abroad.

SYSTEMS ANALYSTS/LECTURERS c£11,000 BERKSHIRE

If you are a really experienced Systems Analyst with experience of VME and/or DME or TPMS or indeed any other TP monitor and you are looking for a change, this could be your opportunity. Our client is looking for people who would like to use their DP knowledge and communications skills to train people to become effective Systems Analysts. Call for further details!

SENIOR SYSTEMS ANALYST £11,500 SURREY

Ideally applicants should have minimum four years' analysis on IBM equipment, under DOS or DOS/VSE and CICS. Programming background advantageous but not essential. Applicants must have done major project from implementation to support. Applications include sales, purchase and nominal ledgers. You will also be required to deputise for Project Manager. Excellent career prospects and fringe benefits.

PROGRAMMERS £8,000-£12,000 LONDON & HOME COUNTIES

CALLING ALL IBM COBOL PROGRAMMERS
If you have a minimum of two years' experience under DOS/DOS VSE, with or without CICS, our client would like to hear from you. VM/CMS or DL/I would be an added bonus. We offer a large selection of interesting positions, high salaries and perks.

PROGRAMMER/TEAM LEADER c£11,000 LONDON

Our client wishes to recruit a DP professional with five years' programming experience which should include some IBM Cobol, also writing program specifications on large machines. Previous supervisory experience is essential, along with Database, On-Line Systems and Modular Programming techniques, to take charge of a significant development team and existing systems.

CONSULTANTS

CITY

ATTRACTIVE 5 FIGURE SALARY

IMT is an established consultancy in the areas of IBM mainframes and online databases. Due to expansion of our services, opportunities exist for experienced consultants to contribute to a newly formed team with creative ideas.

Applicants, male or female, should have a minimum of 3 years' experience in a consultancy environment, and possess skills in:

- Feasibility studies
- System sizing
- Hardware selection
- Project management
- Database/Network design.

The ability to communicate effectively with both technical and senior management staff is important.

If you envisage yourself in a challenging role, please apply in confidence to Ralph Reed at the address below, giving details of your career to date.

Information Management Techniques
12 Vandy Street, London EC2. 01-477 4902.

HEWLETT-PACKARD
OPPORTUNITIES

Due to the rapid expansion of the HP sector we have many clients, some of whom are first time users, seeking to recruit experienced programmers and analysts. Obviously HP experience is preferable but not a prerequisite as some users are prepared to train.

ANALYST/PROGRAMMER W. LONDON to £11,000
International company based in West London seeks an experienced analyst/programmer to join their development team. The successful candidate will eventually take over the project and be responsible for all maintenance and development. Applicants must have 3 years Cobol including some HP experience and knowledge of IMAGE database.

SENIOR ANALYST/PROG HOME COUNTIES to £12,000
Installation based West of London with a heavy commitment to DP requires a senior analyst/programmer to join their expanding department. Applicants should have around 4 years experience gained preferably on HP equipment (through other manufacturers would be considered, especially if on line and database techniques have been deployed). Excellent career prospects are offered along with all large company benefits.

ANALYST/PROGRAMMER LONDON c£9,000
Software house has requirement for programmers and analyst/programmers to work in either their UK or International project teams. The minimum requirement is 2 years HP Cobol gained in any commercial environment.

ANALYST/PROGRAMMER SURREY c£9,000
Manufacturing company utilising a HP 3000 with a possible upgrade in the near future requires an analyst/programmer to join their small team. Applicants should have in excess of 2 years experience gained in any commercial environment as training on HP systems and software will be given where necessary.

PROGRAMMERS LONDON c£8,000
International financial concern seeks programmers with around 18 months commercial COBOL experience. Applicants with a good academic background are preferred and in return training will be given on HP equipment. For the successful candidate there will be quick progression to senior programmer levels. Perks include annual bonus, subsidised mortgage and some overseas travel.

ANALYST/PROGRAMMER LONDON c£9,500
Small but expanding HP 3000 site seeks an analyst/programmer to join their team. The successful candidate will be involved in development of new systems and possibly assume a management role in the near future.

This is just a small selection of current requirements; for details of these and others not advertised call us now.

Senior Project
Engineer

Software
circa £10,000 (October review)

At Scottish & Newcastle Breweries plc we have been making major advancements in process control with Intel Microprocessors supported by two MDS Intellec Systems.

The scale of our brewing operation — 4 major brewing centres in Edinburgh, Newcastle and Manchester producing large volumes of our McEwans, Youngers, Newcastle and Harp ales and lagers — present massive scope for plant systems development.

Taking up this challenge is our Group Automation Team of electronics, automation and software engineers operating from our base in Edinburgh.

To strengthen this team we have an excellent career opportunity for a Senior Software Engineer to specialise in software design and maintenance using high level languages.

You should be an innovator, holding a degree in computing science or allied subjects with programming experience allied to an understanding of computers gained in a Scientific or Engineering environment.

Rewards will include a salary of circa £10,000 (review in October), excellent non-contributory pension and life assurance scheme, free beer allowance, generous hotel concessions and substantial assistance with re-location costs where applicable. Qualified candidates, male or female, should write or telephone for application form to:

Real-Time Applications

London/EEC: Salaries to £14K

A highly successful British Systems and Software House has outstanding opportunities for real-time software experts from Programmer to Team Leader level. Applicants should offer at least two years' real-time programming experience in either FORTRAN, PASCAL, MACRO II or Assembler. Particular hardware is not important, but you will be expected to have had exposure to a leading mini- or micro-computer. Application areas of interest are: Data Communications and Networks, Message/Packet Switching, Process Control or Defence. Candidates who demonstrate management potential will, of course, be considered for the more senior positions. Ref: L/28/A

Pascal Programmers

H. Counties: Salaries to £10K

The Research and Development division of a leading multi-national corporation requires a number of Programmers to assist in the development of both Applications and Systems Software. All respondents should possess a Degree or H.N.C. in a relevant discipline followed by at least two years in industry. A minimum of one year's development experience on either Intel 8080/5 or Z80 based systems, preferably running under CP/M or UNIX is essential as is fluency in Pascal. Knowledge of prototyping techniques and an Assembler language are useful supplementary skills and will attract a salary premium. Ref: L/28/B

RSX II Applications & Systems

Hants/Surrey: Salary to £12K

On behalf of the Consultancy and Software Services Division of an E.E.C.-based Company we are seeking a number of Systems Engineers and Applications Programmers. Software programming expertise should include fluency in a high level language such as Pascal or Fortran whilst some involvement with M.O.D. hybrid systems where stringent programming and design specifications within a multi-microprocessor environment are employed. Ref: L/28/C

Communications Programmers

Central London: Salary to £10K

A number of Development Engineers are required for the Communications Division of a market leading supplier of message and packet-switching systems. Of particular interest to our client will be Programmer/Designers who have at least two years' experience in the design and development of terminal controllers and protocol converters, especially where this has required familiarity with bi-synchronous line procedures. Fluency in a high-level language such as Pascal and a working knowledge of Assembler are prime requirements. Applicants who are familiar with IBM, Burroughs or ICL mainframe protocol standards will be especially welcome. Ref: L/28/D

Process Control Systems

Central London: Salaries to £15K

A Systems & Software House, with an excellent reputation for providing total systems solutions, has a number of vacancies for Programmers and Project Leaders with at least two years' Process Control systems experience. Suitable candidates for the senior positions will be required to have had responsibility for system hardware procurement, installation, commissioning and software generation, preferably in the chemical or oil industries. Applicants for the Programming posts should be fluent in an Assembler and a high level language such as Pascal or FORTRAN. Although the vast majority of work is in-house, occasional visits to client sites will be required and a degree of mobility is, therefore, essential. Ref: L/28/E

Micro Design Engineers

Wilts/Avon: Salary to £10K

A number of Micro-Processor Design and Development Engineers are sought by a leading micro-computer and semi-conductor manufacturer. As there are a considerable number of positions available, the variety of skills required is, necessarily, diverse. However, experience in one or more of the following areas is essential: customisation of Operating Systems such as CP/M or MP/M, with a salary premium attached to a knowledge of a networking O.S.; compiler and cross-compiler development particularly if utilising PASCAL or C; familiarity with a leading MDS and, also, experience in the design and production of interface hardware and software. A degree of customer contact is a feature of most of these positions and, therefore, an outgoing personality and good communication skills are required. Ref: L/28/F

Micro Software Development

Cambridge: Salaries to £12K

Programmers and Software Team Leaders are urgently required to assist in the development of applications and systems software for a new generation of micro-computers. Successful candidates for the positions of Team Leader will be fluent in a high-level, block structured language and have specified and implemented at least one compiler. Working in-house, their responsibilities will include the design, development and commissioning of systems software and the evaluation of commercial packages submitted by sub-contractors. Programmers will also be expected to offer fluency in a block-structured language and, preferably, have gained the majority of their post-graduate experience on micro-based systems. High standards of documentation and the ability to conform to tight deadlines are required of all respondents who, in return, will be rewarded by highly competitive salaries and a dynamic working environment. Ref: L/28/G

Navigation Systems

Inner London & Home Counties: Salary to £12K

A highly regarded supplier of precision instruments and electronic devices is seeking several Software Development Engineers for its Thames Valley based Research & Development Laboratory. Suitable applicants must be numerate graduates who are currently involved in the design and development of micro-processor based control systems. Practical programming skills must include total fluency in one or more of: Pascal, Fortran or Macro II. Candidates should have the ability to resolve complex software problems for end users demanding total reliability or where operating conditions are not necessarily conducive to high technology products. Ref: L/28/H

The Royal Borough has an ambitious approach to the use of computers and computer systems. Currently running on IBM 4341 with VM/SP, DOS - VSE/AF 2, CICS and VSAM. We are shortly moving to VTAM and the linking of 6140s to the 4341. We provide personal computing facilities to a rapidly growing number of users via APL, ADRS, API and BASIC. We are seeking to fill the following posts in our lively and professional DP Department.

SYSTEMS PROGRAMMER

Ref: CW/711

£10,536-£11,589 p.a. inc. (pay award pending)

We need an experienced Systems Programmer to assist us to maintain the momentum of change in the organisation. Heading a team of four, the position will be responsible for the evaluation, installation, maintenance and development of all software in addition to the development and control of network procedures. You should have at least three years' experience as a Systems Programmer, sound assembler knowledge and experience of the software currently installed.

PERSONAL COMPUTING OFFICER

Ref: CW/712

£9,999-£11,001 p.a. inc. (pay award pending)

Personal computing is seen as a key area of expansion supplementing our own development projects and allowing user staff to enhance existing and develop new systems. The work will include conducting feasibility studies into user requirements and recommending the use of personal computing facilities. In addition, the work will also involve the design of systems using 8100 and mainframe facilities. You should have at least five years' D.P. experience including analysis and knowledge of system software in addition to a working knowledge of APL and BASIC. Benefits for these posts include modern offices, subsidised restaurant, sports and social club, interest-free season ticket loan, generous holiday arrangements and flexitime.

For further information contact Tony Eldred on 837 5464 Ext. 682. Please tel. ext. 282 for application forms. Closing date for application: 23 July 1982.

SCIENTIFIC PROGRAMMER

for

COMPUTER AIDED DESIGN

Mullard Southampton is a leader in the dynamic world of the silicon chip; we design, develop and manufacture MOS integrated circuits.

One of our key areas is the Computer Aided Design activity which is essential in the design of integrated circuits.

We now offer you the opportunity to join us at the forefront of the micro-electronics world - we need someone (male or female), with programming knowledge and experience in a scientific application, preferably Fortran or Algol, to join our CAD team. The work is varied - ranging from creating systems to programming on dedicated computers with Tektronix graphics.

You will probably have a degree in a relevant scientific subject with an appreciation of electronics and have a couple of years programming experience.

Salary will depend on the experience you can offer us and there are excellent fringe benefits, including generous relocation expenses where necessary.

Please write with details of your qualifications, experience and current salary to: Lucy Ward Dyer, Personnel Officer, Mullard Southampton, Millbrook Industrial Estate, Southampton SO9 7BH. Or telephone Southampton (0703) 775533.

Mullard
Southampton

MAKE A NOTE!

A Brand New IBM Site

INVESTMENT has become a rare word, but for our client it is a significant part of their long-term computing strategy. The investment will include a BRAND NEW COMPUTER CENTRE in HODDESDON, HERTS. Utilising new IBM 4300 equipment and all the latest technological aids and facilities, the site will form the local point for a major development program examining new applications for users in Manufacturing, Distribution, Finance and Commercial areas. To firmly establish YOU with the opportunity company are providing in terms of career and personal development, will be immense.

PROJECT LEADERS

Communicative skills are paramount as you will be the prime interface between the user and development teams. You should have a sound commercial/business background coupled to the technical knowledge associated with analysis and design.

SYSTEMS ANALYSTS

ALL LEVELS ARE REQUIRED - You will be proficient in design techniques and able to play a major role in the successful implementation of

systems. IBM hardware/software experience, particularly in the areas of database and teleprocessing, would be a distinct advantage. Once again ALL LEVELS should apply. The minimum requirement is 1 year's COBOL general programming experience. For the Senior roles you will have a knowledge of CICS and/or DL/I and be able to design and train less experienced staff. The company would also like to talk to IBM ASSEMBLER programmers and those of you ambitious to develop careers in SOFTWARE and TECHNICAL SUPPORT.

ANALYST/PROGRAMMERS

A stepping-stone to systems analysis. You will have the same skills as above but in addition, design techniques will be required. Potential is a key word in this area.

MISCELLANEOUS

An odd job title, but applications are also invited from those professionals currently developing projects in the areas of Personal Computing, Mainframe systems, APL, Operational Research and Information Processing. The company are in the enviable position of being able to use the technology of the 1980's to investigate, develop and implement new systems and require the skills to match.

In all cases freedom to use your CREATIVE FLAIR and take full advantage of a COMPREHENSIVE PERSONAL DEVELOPMENT POLICY are the principal reasons why you must join our client now! The starting salary - purely negotiable! Our client expects the best available and will pay whatever is necessary to get it. Additional benefits are excellent and a FULL RELOCATION PACKAGE is offered. The new premises will be operational by the end of AUGUST so those joining now will immediately start at the new location.

Project Manager £12k plus car Hours Computing Staffordshire

With its excellent reputation for providing full turnkey solutions, bureau and software services to its wide user-base, HOURS COMPUTING has been steadily expanding since its inception. Based in Stafford and serving users U.K. wide as a Digital OEM, they currently require to employ a PROJECTS MANAGER to fill a senior role in the company with an involvement in its move to VAX/VMS based systems.

The successful candidate will have proven man-management experience, together with a thorough understanding of DEC/Equivalent Mini based systems, preferably RSTS/E, BASIC+, to enable him/her to lead a team of 15/16 people in a multi-project environment. Previous software house experience is not essential, however the ability to meet realistic deadlines on commercial projects is a prime requirement.

Remuneration will include a salary of £12,000, a company car and several attractive fringe benefits.

IBM SYSTEMS PROGRAMMERS to \$50,000

We have been retained by National Semi-Conductors, one of the world's largest and most successful electronic companies. They have immediate permanent requirements for highly experienced people based in

CALIFORNIA

It is essential to possess a degree in Computer Science or related subject, coupled with an in-depth experience of MVS internals encompassing CICS, ACS/VTAM, SPS, TSO, SPF, and a sound working knowledge of SMP4.

A good appreciation of telecommunications, ideally ASF/VTAM, but TSAM or VTAM would be acceptable.

The successful candidates would be expected to have installed and maintained program products, also to be fully conversant with ASSEMBLER language.

These are exceptional opportunities for highly skilled d.p. professionals who have a strong desire to succeed in a competitive environment.

Section Leader

Industrial Automation Division
Rugeley, Staffs.

Advanced industrial automation will be the life blood of Britain's industry of tomorrow, and Thorn EMI Automation are now establishing a strong lead in this rapidly growing field. Due to expansion and new contracts, a key position has been created within a specialist team of Software Engineers at the company's headquarters in Rugeley, Staffordshire.

The team is responsible for a variety of projects in industrial control systems development. Projects involve the use of PDP11, LSI and INTEL processors under RSX11M, RSX11S and RMK.

We are interested to hear from all people who feel they are suitably experienced and qualified. Two years experience with FORTRAN, MACRO II, CORAL 88 and ASSEMBLER would be most relevant, together with leadership of a team of skilled engineers.

The company offers good career opportunities, with wide scope for involvement with interesting projects and modern technology.

Competitive salaries, large company benefits and appropriate relocation expenses are offered. The company is based in a pleasant rural low-cost housing area.

Please apply in writing to the Personnel Manager
THORN EMI Automation
P.O. Box 4, Rugeley, Staffs.

University of London
Computer Centre

Network Management

A competent and energetic individual is required to assist the Network Management Section which is responsible for the planning and implementation of new networking facilities to enable National, Regional and Local academic computer traffic to access the mainframes at the Centre and also the services available at other major computer centres.

The network to be implemented will use new standard protocols such as X.25, Triple X and JTMP.

An ambitious Front End System is being developed at the Centre to support a large number of RJE's and to provide an extensive keyboard service working through P.A.D.s.

Connections will be made to P.S.S. and to an academic Packet Switched Network.

The individual appointed will also play an active part in the management of the Network Support Section which is responsible for the day-to-day operation of the extensive network.

Applicants should have a good technical experience in Data Communications or a directly related field and have the ability to organise and supervise projects. It would be an advantage to have qualifications which are relevant.

The position carries a salary of up to £10,785 (under review) depending on age, qualifications and relevant experience.

Application forms are available from the Assistant Secretary, U.L.C.C., 20 Guilford Street, London WC1N 1DZ. Telephone: 01-406 6400, Ext. 341.

Applications close two weeks after publication of advertisement.

(0208)

UNIVERSITY OF
NEWCASTLE UPON TYNE
COMPUTING LABORATORY

TEMPORARY DEMONSTRATOR

Applications are invited for the temporary post of Demonstrator in the Computing Laboratory services from 1st August 1982 to 31st July 1983. Candidates in any area of specialisation will be considered. This post will be particularly attractive to a Ph.D. student who needs some extra time to complete his/her thesis.

Salary will be at an appropriate point on the Grade 16 (Bar) scale: £5,785-£7,700 per annum, according to age, qualifications and experience.

Further particulars may be obtained from the Deputy Registrar, P. J. The University, 8 Kensington Terrace, Newcastle upon Tyne, NE1 7LU, to whom applications (2 copies) together with the names and addresses of three referees, should be submitted as soon as possible. Please quote reference CW.

(0207)

UNIVERSITY OF SUSSEX
School of Engineering and Applied Sciences

RESEARCH POSTS

(1) Research Fellow: To join an existing research team working on a successful ongoing project into the design and implementation of a multiple microprocessor distributed computing system. Applicants should have either a higher degree or equivalent experience and have a working knowledge of system software and the use of procedural languages. The appointment is for 18 months in the first instance and the salary will be on the scale £5,010-£10,575 per annum (under review).

(2) Research Officer: To join a new research team to work on an SERC collaborative project with industry into the design and implementation of a broadband optical cable local area data network. The applicant should have a good honours degree and experience in the use of microprocessors and an interest in the writing of networking software. In addition, a knowledge of electronic circuits and high frequency techniques would be an advantage. The appointment is for 3 years and the applicant may register for a higher degree. The salary will be on the scale £5,280-£7,700 per annum (under review).

Please write giving details of current employment and experience together with the names of 3 referees to: Professor J. C. Stannard, School of Engineering and Applied Sciences, University of Sussex, Falmer, Brighton, Sussex BN1 9QJ.

JOBS IN SOFTWARE

THERE IS A
WORLD OF DIFFERENCE IN
A CAREER WITH

So why not attend our

Informal Interviews

at Cafe Royal

Regent Street London

from 12.00 noon till 9.00 p.m. on

MONDAY 19th JULY 1982

Systems Designers Limited is a leading international computer systems consultancy specialising in the application of mini and micro computers to high technology real-time systems, together with the development of pertinent languages and system development tools.

We currently require Software and Systems Engineers with good academic background and extensive experience of mini or micro computers in technical applications. Flexibility and adaptability are prime requisites. Variety of work and excellent career prospects are the rewards and opportunities exist for work in the UK, Europe and USA.

Principal areas of interest include:

Tandem Non-stop Financial Systems
Industrial Process Control Videotex Systems
Database Design Advanced Software Technology
Real-time Defence Telecommunications

If you cannot attend, but the prospects interest you, please contact Bill Hockey, Operations Director (ask the operator for Freephone 3179) or write to him at:

Systems House, 105 Fleet Road, Fleet, Hampshire GU13 8NZ

Contract Professionals

The Agency Alternative

As a contract professional you are obviously aware that many companies rely very heavily upon contract staff, perhaps in Data Processing and Computing more than any other field.

Previously - the only major recognised link between companies seeking contract personnel and the contractor offering technical or intellectual skills and expertise was the agency.

Now - there is a new channel of communication enabling you to make direct contact with the companies looking for the specific skills that you can provide.

The Irex Clearing House is a membership network, a division of Ideas and Resource Exchange Ltd, specifically devised to effect introductions between members who have compatible needs and interests.

We store the detailed information that you provide about your services and capabilities for immediate recall and matching against user members' requirements.

Over a thousand of the top industrial and commercial concerns in the UK have the use of the Irex computer to search through its databanks to find members who are offering the services they require.

Advantages of the Clearing House:-

- You can agree your own terms of contract directly with the user, free from third party involvement or fees.
- Every single member requirement for which you are qualified will be sent to you.
- You are free to contact any member company seeking your skills.
- Your details are never sent to any user until you have given your permission, so the service is completely confidential.
- You are assured of being accurately presented to your chosen users, because you write your own profile.
- The service is extremely fast.

Currently, our members have urgent requirements in many areas of Data Processing and Computing. We also operate in a number of other disciplines including Finance and Accountancy, Engineering and Management Consultancy.

For further information about the Irex organisation and for details of membership of the Clearing House, please call John Edwards on 01-261 1543 (24 hours) or send him the completed coupon below.

IBM System/38**Programmers
and Analysts****for client support
in the UK and Europe
Salaries to £13,000+benefits**

Datasense, a software house specialising in IBM equipment, need additional staff to meet continued business expansion. If you are an enthusiastic, self-motivated professional, we can offer varied and challenging assignments both in this country and overseas. Our work ranges from software package development to the implementation of complete custom-built systems.

As the first UK software house to install an IBM System/38, our company has attained an international reputation as System/38 experts.

PROGRAMMERS — with a minimum of two years experience using RPG, preferably in an interactive environment.

ANALYSTS — with a minimum of four years experience, and ideally a knowledge of Database systems.

For further information please contact:
Dave Miller or Tony Rundle, Datasense Limited
Blue Line House, Elys Estate, Angel Road,
London N18 3BJ
Telephone 01-803 8618

datasense**Reliable Software Support
starts with a call to Link**

Formed two years ago LINK ASSOCIATES has built a reputation for effective and professional service in the areas of:

- ★ Contract Hire
- ★ Managed Contract Facility
- ★ Independent Consultancy

We have fulfilled a wide range of technical and commercial assignments for our clients, all of whom would give a good reference for the service that we supply.

We have a self imposed Code of Practice which is strictly adhered to for the protection of our clients, our permanent consultants and our contract staff.

If you have a Software problem on mainframe, mini or micro, your solution starts by contacting:—
Link Associates Limited
24a High Street, Chesham, Bucks. (0494) 784922

**Systems
Software Designers
Network Management Software
£8,000-£16,000 + — Bracknell**

We need designers and implementors to further develop our NETWORK MANAGEMENT SOFTWARE.

Working with a wide range of ICL systems and OEM machines, you would be part of the team developing this major component in ICL's offerings as a total network supplier.

If you have a proven track record as a designer or implementor in the network management field then you could be the person we are looking for.

The salaries will be in the range of £8,000 to £16,000 (more for outstanding applicants) together with major company benefits including assistance with re-location and genuine career development opportunities.

If you feel confident of your ability in this field then telephone Mick Wright or Margaret Hollingsworth on 0344 24842 or send your C.V. to Margaret Hollingsworth at ICL, Lovelace Road, Bracknell, Berkshire, RG12 4SN.

**SYSTEMS
PROGRAMMING
Cambridgeshire**

Our client, a very successful British company using IBM 4300's under DOS/VSE with CICS and DL1, wishes to recruit additional systems programming staff.

We invite applications for vacancies at the following levels:—

SYSTEMS PROGRAMMERS c£10,000

Candidates should have about 2 years systems programming experience in a DOS/VSE, CICS environment or have considerable practical experience of VM. (CW/8229).

JUNIOR SYSTEMS PROGRAMMERS c£8,000

These vacancies should appeal to young programmers wishing to develop their career in systems programming.

A sound background of about 3 years programming in an IBM mainframe installation is required and this should include about 12 months using ASSEMBLER. (CW/8230).

The general conditions of employment and promotion prospects are first class and excellent starting salaries will be negotiated with successful candidates. Generous relocation package, which includes an interest free bridging loan, is available in appropriate cases.

Contact Cathy Scott quoting the appropriate reference.

DP RECRUITMENT CONSULTANT

We are seeking an ambitious and self-motivated Consultant with a professional approach to DP recruitment activities for contract or permanent personnel. You will display a successful track record within recruitment consultancy, and in return, we will offer higher personal rewards based on achievement, coupled with greater scope and responsibility. Ref: C9200

COMMUNICATIONS CONSULTANT

£16,000 + car
This leading software organisation requires a Consultant with up to a decade of experience in network planning, dimension and equipment, and message switching; preferably System X26. The successful applicant should also have a good working knowledge of the design and implementation of data communications, software, and associated security. Ref: C9210

TECHNICAL SUPPORT MANAGER

£15,000
Our client, based in London, is a well-known commercial organisation with a large investment in the development of online systems. This company is currently seeking a Technical Support Manager to take charge of a small team of specialists, whose functions include software programming, network and database control. The successful applicant must have a CICS or SHADOW background with systems programming using BASIC ASSEMBLER language plus any high level language experience. This position would ideally suit someone wishing to take the next step into management, and at the same time maintaining technical competence. Ref: C9192

SENIOR SYSTEMS PROGRAMMER

£15,000
This large manufacturing company situated in the London area requires a Systems Programmer with BAL and some MVS experience. The successful applicant will take charge of a team of three. Excellent career prospects in a progressive and expanding environment. Ref: C9220

SYSTEMS INSTRUCTOR

HERTS to £15,000
Our client is continuing to expand its business, and as a consequence has a fast-growing data processing complex. In order to maintain the high standards of its internal training facilities, the company needs a talented instructor with at least seven years' systems and COBOL programming experience, together with a working knowledge of large IBM systems using IMS. Ref: C9206

RPG 2/3 PROGRAMMERS to SYSTEMS CONSULTANTS

to £15,000
A number of our clients situated in London/Home Counties and South East England are seeking Programmers and Analysts with 2-3 years' RPG experience, preferably on System/34 and/or System/38 equipment, capable of working on their own initiative. Applications include the specification, design and implementation of a wide variety of commercial systems. Ref: B9187

ANALYST/PROGRAMMER

HERTS to £14,300
This large organisation is currently seeking an Analyst/Programmer with a minimum of 3 years' COBOL, CICS together with 12 months' design experience, preferably in a DOS/VSE environment, using database facilities. There is considerable scope to progress in this rapidly expanding business. Ref: C9201

ANALYSTS TO PROJECT LEADER level

to £14,000 + benefits
Three of our clients situated in Middlesex, London and Kent Coast, with commitments to developing online systems, are seeking development staff at all levels. The successful applicants will have at least 2 years' programming experience in COBOL, or PL1 together with a proven track record in systems development in Insurance, Banking or other financial applications. A knowledge of CICS would be an added advantage. Benefits include bonus and profit sharing. Ref: A9041

SENIOR SYSTEMS ANALYST

£13,500 + profit share
This London-based financial organisation needs someone with at least 2 years' design experience to take an important role in the development of their applications. Previous online experience is essential, together with a good understanding of database concepts. A knowledge of CICS and/or IDMS would be ideal. Ref: C9081

BUSINESS ANALYST

MIDDX £ Market+
Our client is a major computer user, and is currently creating a new division to handle the marketing of new products. As a consequence, the company needs a Business Analyst with at least 2 years' sound systems experience coupled with a programming background. This is an ideal opportunity to take a lead in development of a wide range of applications using a variety of software aids and hardware tools. Ref: C9085

RESEARCH ANALYST

to £13,500
Our client is seeking someone with specialist skills to undertake a consultancy role in the investigation of hardware and software facilities, and assess its suitability to the Group. The job entails a wide range of activities including communication with suppliers and users, preparing findings and recommendations, pre- and post-installation of products, education and support. The successful applicant must possess a wide variety of technical skills; together with a broad perspective and good business sense. Ref: C9216

SHIFT CONTROLLER

MIDDX £13,000
This large organisation is seeking someone with extensive operational and supervisory experience to take charge of one of their shifts running under MVS. Ref: A9228

CHIEF PROGRAMMER

SUSSEX COAST £12,000
This company requires someone with a strong IBM COBOL and/or ASSEMBLER experience to take charge of their team of Programmers in a CICS/DLI environment. This position offers great opportunities, accompanied by excellent salary and fringe benefits. Ref: A9051

PROGRAMMERS TO SYSTEMS ANALYSTS

SUSSEX to £12,000
This Crawley-based company offers excellent prospects to those COBOL Programmers and Systems Analysts who wish to enhance their technical skills. Excellent fringe benefits. Ref: A9045

ANALYSTS & PROGRAMMERS

HANTS to £12,000 +
This major company is undergoing development of new online systems and is seeking Analysts with at least 12 months in system design, preferably with an Insurance or financial background. Vacancies also exist for Programmers with 2 years' COBOL experience. Benefits include profit sharing and annual bonus. Excellent prospects. Ref: C9185

TEAM LEADER

HERTS £11,500
Our client, a well-known manufacturing organisation, requires someone with supervisory skills to take charge of their small team of Analysts and Programmers in a DME 2 environment. The successful candidate must have a sound systems and COBOL programming background, together with a good understanding of ICL 1800 or 2903/2804. Ref: C9146

PL1 and COBOL PROGRAMMERS

to £11,500 + benefits
A number of our clients situated in London, the Home Counties, and S.E. England, need Programmers with a minimum of 2 years' PL1 or COBOL experience for the development of real-time systems. A knowledge of CICS and DLI would be an advantage. One of our clients is also seeking a Junior Programmer with at least 6 months' commercial experience in PL1, where there is a prospect of moving later into analysis. Ref: B9102

DATABASE SPECIALIST

LONDON to £11,500
Our client is seeking to complement its Technical Support Team with a specialist responsible for database design, the monitoring of program development to ensure their efficient use, and performance tuning of operational systems. This successful applicant will have sound experience of database design, and a good understanding of CICS in an MVS environment is desirable. Ref: C9217

TEAM LEADER PROGRAMMER

**c£11,000 + Bonus
c£9,000 + Bonus**
Our clients, an international leisure company situated in London, are seeking a Team Leader with a minimum of 3 years' IBM COBOL experience and a good working knowledge of CICS, to lead a team of 4 Programmers, also a Programmer with a minimum of 18 months' IBM COBOL, preferably with CICS experience. Both positions offer long term security and excellent salaries, conditions and benefits. Ref: B9079

CHIEF PROGRAMMER

£11,000 (early review)
Our clients, a large commercial industry in Middlesex, are seeking someone with several years' IBM COBOL experience ideally gained in an OS environment. Knowledge of CICS, TOTAL and ROSCOE would be useful, together with good supervisory skills. Among the many excellent benefits offered are free BUPA, relocation where applicable. Ref: A9092

SYSTEMS ENGINEERS

LONDON/CHESHIRE c£11,000
This leading computer organisation requires Software Engineers with at least three years' practical experience of installing, testing and debugging equipment and systems. An appreciation of mini/micro computer systems/peripherals, and a knowledge of industrial interface equipment for digital and analogue signals, backed up by an HNC in Electronic Engineering is desirable. The successful applicants will be involved in selection, configuration through to installation of hardware for industrial real-time computer systems. Ref: C9304

SYSTEMS INSTRUCTORS

LONDON £11,000
This well-known organisation, highly skilled in the training of all levels of development personnel, is seeking two talented Analysts with communicative skills, to impart the knowledge, techniques and disciplines of Systems Analysis. A programming background is also an important attribute for this challenging and responsible position. Ref: C9078

ANALYST/PROGRAMMERS

MIDDX £ Market
This company is in the process of creating a new section to handle the development of a wide variety of bespoke systems. Computer professionals are needed with 2-3 years' COBOL, BAL or PL1, together with some systems experience where this has involved a fair degree of user contact. Excellent prospects. Ref: C9212

PROGRAMMERS

UK & ABROAD to £11,000 +
Major Software House has a requirement for Programmers with 3 years' COBOL experience to work on various client projects. The successful applicants must have a good understanding of ICL 1900/2900 system software, or HONEYWELL GCOS, TDS, DMV. Generous overseas allowances given where applicable. Ref: C9103

SYSTEMS DESIGNERS

LONDON to £11,000
This major Software House is currently seeking Systems Designers with HEWLETT PACKARD 3000 experience, to specify and develop commercial systems for various clients. An ideal opportunity to consolidate your experience and widen your hardware/software base with a progressive organisation. Ref: C9111

FORTRAN SPECIALISTS LONDON/HOME COUNTIES

to c£11,000

ANALYST/PROGRAMMERS SUSSEX/KENT c£10,000

A number of companies in Sussex and Kent need Analyst/Programmers with COBOL or RPG2/3 experience, to work on a wide variety of applications. Opportunities also exist to work with the latest equipment, i.e. IBM 4300 and System/38 etc. Ref: A9053

ICL (ANALYST) PROGRAMMERS HERTS/MIDDX. to £10,000

This famous manufacturing company requires Programmers and Analyst/Programmers to take a leading role in the development of a number of small to medium sized commercial systems. Applicants must have about 18 months' COBOL, together with a working knowledge of ICL 1900 or 2900 system software. Ref: A9207

SENIOR PROGRAMMER SOUTH COAST £9,500

We have been asked to assist in the recruitment of a Senior Programmer with a minimum of 3 years' COBOL experience and an IBM background. Preferences will be given to applicants who have a working knowledge of CICS/DLI. This position holds the responsibility for four other Programmers, therefore an ability to lead a team is desirable. Excellent benefits apply, including free BUPA and relocation, where applicable. Ref: B8956

SYSTEMS ANALYST KENT COAST c£9,300 + benefits

This company needs an Analyst preferably with a COBOL programming background, to take an important role in the development of their financial applications. The company offers superb fringe benefits which include cheap mortgage facilities. Ref: A9045

PROGRAMMER BERKS c£9,000

This well known electronics company is developing a number of real-time commercial systems, and needs an additional Programmer with 18 months' IBM COBOL experience to meet these requirements. A knowledge of CICS would be an advantage, but training will be given to the successful applicant. Ref: A9222

H.P. PROGRAMMERS SURREY/BUCKS/BERKS/MIDDX. c£9,000

Our clients, well known consumer industrial groups and a software house, are seeking COBOL Programmers with around two years' experience, ideally in interactive HEWLETT PACKARD 3000 or similar mini-computer systems. These positions offer an excellent career path, coupled with good fringe benefits. Ref: B9180

BAL PROGRAMMER KENT £8,000

Our client requires a Programmer with about 12 months' ASSEMBLER experience to assist in the development of various commercial applications. There is an opportunity to gain experience in a high level language together with training in systems analysis. Attractive benefits. Ref: A9037

ICL PROGRAMMER MIDDX £8,000

Our client needs a Programmer with at least 18 months' COBOL experience in a GEORGE 2 or DME environment. An opportunity exists to also gain experience at design level. Ref: A9226

FIELD SERVICE ENGINEERS c£8,000 + car

This rapidly expanding company needs Engineers with 3 years' experience in the servicing of minis, micros and peripherals, at sites in Hampshire and Yorkshire. The ability to liaise at all levels is essential for these positions. Ref: C9028

JUNIOR PROGRAMMER MIDDX. £7,000 +

Our clients, an international publishing company, are seeking someone with 5-12 months' experience of IBM COBOL, to join their friendly young team. Training in CICS will be given. A fixed-time system is in operation and many other fringe benefits apply. Ref: B9180

OPERATIONS

DOS OPERATIONS MIDDX. £8,750 + benefits

A large international organisation are seeking two Operators with a minimum of 2 years' DOS/VSE, CICS experience to work on their IBM 4331 range. A 2-shift system is in operation. The company offers an excellent salary, free BUPA, L.Vs and good promotional prospects. Ref: A9040

OPERATIONS SUPERVISOR N.W. ENGLAND £8,500

A well-known manufacturing company is seeking someone with at least four years' HONEYWELL Operations experience, preferably with DPS 100. The successful applicant must be able to communicate at all levels of D.P. and line management. Excellent working conditions and benefits apply, together with relocation expenses where applicable. Ref: B9240

BURROUGHS OPERATORS LONDON/SURREY to £7,800

These companies need Operators with a minimum of 6 months' experience on B6700, B6800 or B6900 equipment, to work a 2-shift system, where there are excellent prospects. Ref: C9159

SENIOR OPERATOR BEDS c£7,500

A minimum of 18 months' experience of MVS/JES2 is required to work on IBM 3031 and 4341 range. An excellent career structure in an ultra-modern environment coupled with many fringe benefits are offered. Ref: B9181

DEC OPERATOR LONDON £7,200 + benefits

Our client, a leading international financial organisation needs an Operator with a minimum of 12 months' AIMS and/or RSTS. A knowledge of SWIFT would be an advantage. The site operates a 2-shift system, and the numerous benefits offered include subsidised MORTGAGE facilities. Ref: B9241

DEC OPERATORS SURREY c£7,000 + fringe

Large organisation in Surrey is seeking an Operator with at least 18 months' RSTS/E experience (will consider RSX) for small department on 2 shifts. Ref: B9182

DOS OPERATOR LONDON c£7,000

This busy installation is seeking an Operator with a minimum of 18 months' DOS/VSE experience to work in a 2-shift environment. This position would ideally suit someone wishing to move quickly to a senior position with more responsibility. Ref: C9152

OPERATOR ESSEX to £7,000

A well-known manufacturing company are seeking an Operator with approximately 2 years' experience of DOS/VSE for their IBM installation. A 2-shift system is worked, and the position is progressive for the right applicant. An above average salary together with an excellent career path is guaranteed. Ref: A9150

OS/VS1 OPERATOR MIDDX. £6,500

Required for busy installation running under 3 shifts. This position would ideally suit someone with about 18 months' good technical experience in order to liaise with TSG. Good prospects and benefits attributed to the position. Ref: C9104

ICL OPERATORS LONDON £6,500

A leading Banking organisation require Operators with around 12 months' VME/B and/or DME experience. The site comprises of 2 x 2860 range. The positions offer long term security and a structured career path leading to Programming. Ref: B9059.

OPERATOR LONDON c£6,300

This position would suit an ICL 2904 Operator who would like to be trained on the fast expanding DEC(VAX) System. The site is based in the City, and will soon be operating on a 2-shift basis. Many good opportunities exist for a career minded person. Ref: B9183

JUNIOR OPERATOR LONDON c£5,500

This progressive site requires someone with at least 6 months' DOS/VSE experience to work within a 2-shift system. Excellent prospects. Ref: B9199

For a Professional Systems Analyst

the scale is staggering and the prospects immense

With some companies it's easy to outgrow your environment and find your progress grinding to a halt. But at Scottish & Newcastle Breweries we have the room and the prospects for you to realise your ambitions to the full.

As one of UK's leading companies we operate on an extremely large scale — employing over 24,000 people and generating an annual group turnover exceeding \$600 million.

Right now we are looking for professional Systems Analysts with upwards of four years' experience who have the capacity and flexibility to gain a wide understanding of our diverse organisation.

As a Systems Analyst with us in Edinburgh you will be involved in the design and development of DP and office systems to answer the business needs of users throughout the Company. You will control and motivate your team in order to ensure the most effective use of analysis and programming resources.

Linked computer centres at Edinburgh and Newcastle with IBM 370/158 and 4341 Processors run

Scottish & Newcastle Breweries plc

COMPUTER MANAGER IBM S/34

c. £12,500 S.E. LONDON

We are a successful and expanding company in the food industry and need a computer professional to establish and manage the installation of a System 34. This will prove an exciting opportunity for someone of proven ability who will be totally responsible for designing and implementing a range of systems which will eventually embrace all major commercial activities within the company. A thorough knowledge of RPG/IBM and the ability to effectively communicate at all levels is required. Benefits include private medical insurance, pension scheme and relocation allowance where necessary.

Please write with full C.V. details or telephone for an application form, Commercial Director, Hygrade Meats Ltd., Latona Road, London, SE16. Tel. 01-732 8711.

COMMERCIAL INVENTORY SERVICE COMPANY LTD.

CIS is a computer bureau who provide a service to the automotive trade. Due to the imminent relocation of our offices from London to Leeds we require

SENIOR COMPUTER OPERATORS

for the Company's NCR CRITERION V8570. Applicants with at least two years' experience on NCR V series Hardware and VRX operating systems are asked to contact Miss K. Hewitt on 01-404 5862 for an application form.

EASTBOURNE BOROUGH COUNCIL, BOROUGH TREASURER'S DEPARTMENT

ANALYST — PROGRAMMER

Salary Range APS — 922 £7371 — £9528 (National Pay award pending).

Eastbourne is a prestige South Coast holiday resort within easy reach of the Sussex Downs and Beachy Head. The Council's activities are unusually wide, and, in addition to all normal district functions, include a transport undertaking, farms, Highway's Agency, and extensive catering and entertainment facilities.

The above post offers an opportunity for a versatile conscientious person to participate in the development and enhancement of both batch and On-Line Systems, as a member of a small development team in a progressive computer installation.

The successful applicant will have the opportunity to utilise a mixed machine environment of ICL 2804, CMC Reality, and PDP 11/44 equipment. Programming languages include COBOL, BASIC and PLAN. Experience of at least two languages would be advantageous, but appropriate training will be given where necessary.

Conditions of service are good, and temporary housing accommodation and relocation expenses are available in appropriate cases.

Further information may be obtained from Mike Shipley, Computer Service Section, Tel. (0323) 21333, Ext. 332, and application forms from the Borough Treasurer, Grove Road, Eastbourne, BN21 4TW. Closing date 30th July 1982.

COMPUTER MEDIA SALES OPPORTUNITIES (Male or Female)

Norman Magnetics Ltd., the British Media Manufacturer are looking for Senior and Junior Sales People to sell in selected areas in many parts of the UK.

SALARY — CAR — COMMISSION — PENSION SCHEME

Apply in writing to: Meg Fitzgerald, Norman Magnetics Ltd., Inverleith Road, Farnborough, Hants. GU14 7UP. Tel. 0252 515068.

CAD/CAM

Our client is acknowledged as one of the pioneers in CAD/CAM technology.

An interesting opportunity exists for CAD/CAM Systems Designers and Programmers to join a small but expanding CAD group within the Management Services Department. The group consists of production and development teams working with Prime mini-computers.

Applicants should have at least three years experience of Fortran together with three years experience of CAD or Prime minis. Above all you should have sufficient skills to play a significant role in the development of new CAD Systems.

Salaries, terms, and conditions are all you would expect from a major engineering organisation, and a generous relocation package is available where appropriate.

For further details please contact our advising consultant Geoff King at the address below or telephone him on 0296 630506 in the evenings or at weekends.

ECL House, Park View Road, Berkhamsted, Herts. HP4 3EY Phone: (04427) 74941

BRYMBO STEEL WORKS LIMITED have a vacancy for a

PROCESS CONTROL ANALYST

THE JOB

- To lead a small team engaged in the application of Computer Control Systems to on-line production operations, involving not only the maintenance of existing systems but the necessary modifications, improvements and additions to the software of these systems as indicated by production requirements.
- The initial workload will centre on our 2 year old Billet Mill which has a central Computer linked to a series of micro-processors which control individual plant operations.
- The Company have also embarked on a policy which will see further application of computer control techniques to production processes.

THE IDEAL CANDIDATE

- Will be 30 to 40 years of age.
- Will have had some years of experience of, and direct involvement in, the application of process control systems to production operations, preferably, but not essentially, in the steel industry.
- Ideally will have had direct experience in the design and operation of software for controlling operations for rolling mills and, possibly, continuous casting machines.
- Will be able to work with production management and engineers of other disciplines in these areas.
- Will be able to demonstrate ability to achieve results in what is a demanding continuous process industry.

THE COMPANY

- Employs some 1,500 employees and is the leading and largest manufacturer of high carbon and low alloy forging steel billets in the U.K.
- Is located 12 miles south of Chester, one hour's travelling time from Liverpool and Manchester and within easy distance of both the Brnovia National Park and the North Wales holiday resort area.

Please apply, giving full personal details and history to:

Personnel Manager, Brymbo Steel Works Limited, Brymbo, Wrexham, Chwyd, North Wales.

Telephone: Wrexham 756333

A company application form can be obtained from Mrs. B. Robinson, Secretary to the Personnel Manager.

GKN — Britain's largest international engineering group

ANALYST/PROGRAMMERS

CITY/CENTRAL

Opportunities occur at various levels for persons with good BASIC, BASIC+ and/or C programming backgrounds to join a rapidly expanding International Systems House and Consultancy. Excellent careers are available in the development and enhancement of Banking Systems, Data Communications or Message Switching systems in London, America or the Middle/Far East. Applicants should have experience of DEC hardware and software knowledge which includes exposure to communications working. An attractive salary range, dependent on experience and location and reviewed at 6 monthly intervals is supplemented by a generous company benefits package. Ref C4016

EXCEPTIONAL

ALL LEVELS

CENTRAL LONDON

The London Insurance sector is currently the source of a number of opportunities for Systems and Programming Staff wishing for a change in the direction of their careers. We have identified a number of positions available to PROGRAMMERS, ANALYSTS, DESIGNERS, and SYSTEMS ANALYSTS with IBM programming backgrounds in COBOL, PL/I or RPG. Exposure to on-line or Database systems will be an advantage but is not necessary in all cases. These are largely development positions and the companies involved offer excellent facilities for advancement and benefits packages which in some cases include MORTGAGE arrangements. Ref R3803

SYSTEMS ANALYSTS

SURREY

Two leading companies in the financial sector based in Surrey are actively looking for SYSTEMS ANALYSTS to assist with the development of sophisticated new systems on IBM equipment. Candidates will have had experience in designing and installing systems perhaps using structured methods in a banking, insurance or allied environment. The opportunities for advancement coupled with very generous benefits packages make these positions very attractive to already well-qualified people wishing for further development in their careers. MORTGAGE facilities are offered in both cases. Ref R3848/77

£12,000

ANALYST/PROGRAMMERS

KENT

Insurance Company in South West Kent are embarking on a major expansion programme. For this reason they are looking for 2 ANALYST/PROGRAMMERS. The company utilises an IBM SYSTEM 38, therefore candidates would have a knowledge of IBM GSD equipment, and also RPG II or III expertise. There will be much development work, and the opportunity to alter, amend and improve existing systems. The two successful candidates will be key members of a new team, and will be offered excellent promotional prospects. The salary will be circa £10,000 pa with excellent insurance company benefits available, and a very pleasant environment in which to work, and perhaps live. Ref S-4003

£10,000+BENEFITS

ANALYSTS & PROGRAMMERS

MIDDLESEX

Our client, heavily committed to the development and implementation of new financial systems involving both large ICL 2800 and new, advanced mini-computers is seeking Analysts and Programmers at all levels to join their teams. We would be particularly interested in hearing from persons with an ICL Systems and/or Programming background which has included either VME exposure or the use of mini-computers in a COBOL, BASIC or PLAN environment. These are excellent opportunities that involve a high degree of user contact, use of the very latest techniques and a good career path commensurate with a very attractive salary range. Ref C3976

£NE6

VARIOUS LEVELS

LONDON/HOME COUNTIES

We require ALL LEVELS of IBM GSD professionals to fill our current vacancies. These range from JUNIOR PROGRAMMERS to SENIOR SYSTEMS ANALYSTS, in a wide range of companies which include Banks, Software Houses, Insurance companies and Computer Bureaux. Therefore, if you would like a change of position, and a very wide range of options, then contact us for further details of these excellent opportunities. Ref S0001

SENIOR SOFTWARE ENGINEERS

There's one major development project that will challenge your intellect and enhance your career

The world's most advanced telecommunications project

On the edge of London's Northern green belt, one of Britain's foremost high technology organisations is entering a crucial development phase of the world's most advanced telecommunications project. It is the most exciting chapter in a story of investment by STC in New Southgate — creating the facilities and environment to produce the most significant breakthrough in the fastest growth sector of high technology industry.

System X is a real watershed in telecommunications. No other digital communications system can match the sophistication of its computer-based architecture or its capacity to handle a staggering 700,000 user requests per hour. At the heart of the system is its unique software — enabling it to address the complex real-time demands upon a major telecommunications network. Despite the strides already taken in information technology it is these developments which will unlock the full potential for the "office of the future".

System X represents a quantum leap ahead to the convergence of microprocessor and telecommunications technology and will do more to challenge the intellect of the Software Engineers working on it than any other project this decade.

Our need is for Senior Real Time Software Engineers

with a background in communications, defence or process control systems, aircraft simulation, signalling or similar real-time application.

Ideally, you should have at least ten years' experience and be capable of operating at a senior level. We are interested in those who wish to manage a significant software team and also in those who may prefer to contribute as technical specialists. Progression in our organisation is on a "dual ladder" basis where both managerial and technical contributions achieve equal recognition. You will be working within an established software department which is professionally led, and will grow and develop its role over the next few years.

We fully recognise the importance of these positions, and therefore are offering highly attractive salaries, comprehensive benefits and exceptional career prospects.

Find out more about the most exciting development project of the decade, by telephoning Roger Edmonds Brown on (01) 368 1234 ext. 2878 (answering service after office hours). If you prefer, write with full details of your experience to him at: Standard Telephones & Cables plc, Oakleigh Road South, New Southgate, London N11 1HB.

STC New Southgate
The communications development centre

Systems Analyst

IMI Titanium is Western Europe's leading manufacturer of titanium and titanium alloys.

There is now an opportunity for a Systems Analyst to join the Systems Development Section at our Wauernwydd plant near Swansea.

The section uses computers for a range of applications including stock evaluation, order processing and invoicing, the preparation of wages and product costs/trading information. The successful applicant will be expected to lead and motivate a team involved in the development of programmes for new applications.

Candidates, male or female, should possess 3½ years systems analysis or programming experience in a manufacturing industry, have received a good education in relevant subjects and be a good communicator at all levels.

This challenging position offers an attractive salary, a company pension scheme and employees profit sharing scheme.

Please telephone or write for an application form to:

Mr. L.F. Edkins,
Plant Personnel Manager,
IMI Titanium, P.O. Box 67,
Wauernwydd,
Swansea SA1 1XD.
Tel: 0792 873471.

CENTRAL REGIONAL COUNCIL COMPUTER DEPARTMENT OPERATIONS SUPPORT SUPERVISOR

Viewforth

Salary: AF 11, £8,586 — £7,371

35 hours — 5 day week — Monday to Friday. Flexible Working Hours Scheme in accordance with the requirements of the Department. The candidate must have proven experience in the area of Network Control/Installation, IBM utilities, JCL and be capable of working with minimum supervision as part of a small team responsible for Operations Support within an IBM 3035S environment with both local and remote on-line locations. Knowledge of VM and MVS advantageous. Applications in writing stating name, age, experience and qualifications to the Computer Manager, Central Regional Council, Viewforth, Stirling by 25 July 1982.

(0269)

IBM SYSTEM 38 COMPUTER SYSTEMS CONTROLLER

£10-12k p.a.

LOCATION MIDDLESEX

Our client, who provides services to the offshore oil industry, is installing an IBM System 38 in Heyes, Middlesex. They are seeking a Data Processing professional with good operations background to take complete charge of the installation.

Successful candidate must have in-depth knowledge of IBM System 34 or 38 hardware and software, management experience, and most important, be able to liaise diplomatically with outside clients.

For further information, please contact Anne Brauer on (01) 836 8885 or, if you prefer, write to her at:

SALES BIT

Quality of Management—18

So you want to change your boss?

WHILE most managers who visit us at Sales and Marketing Recruiters do so with the firm intention of obtaining a job with a new employer, many come along merely to discuss their career in terms of where they might go next.

Of the many different conversations we have in this context, two in particular are recurrent: "I wish to change both my employer and my occupational discipline" and "I would really like to set up my own business, but I have yet to think of an original idea or discover an unsatisfied demand." These are both apparently reasonable requests that stem from limited business experience and a lack of logical consideration for the total implications of such requirements.

The most common examples are technicians wanting to get into selling, salesmen seeking to secure management status by moving to another company, and managers attempting to advance to a high level of responsibility by the same means.

This is a completely unreasonable expectation. When a company goes outside its own ranks for personnel, it does so to obtain skills that are wholly or partially absent from its own organisation.

No company can afford the risk of employing a stranger unless his skills and capability are already an established fact. If the need was merely that of potential, then there is little doubt that such people are already in the company's employment. The problems are time and risk. The duration and therefore cost, of waiting for someone to gain fluency in a new discipline, as well as getting to know the product, the company, the market, etc., is too much even to contemplate.

For those who are determined to advance their status by moving companies, there is likely to be only one possibility, and that is to move a long way "down market" in terms of company size and stature. Many very small companies are prepared to use the influence of status to attract people from large companies. A district sales manager for a major computer manufacturer may be just the man for a small turnkey systems house which needs a sales and marketing director, even though his complement of subordinates may decline from a significant number to one — including himself!

More often than not, people who wish to change occupational discipline or increase status by way of changing company, do so for reasons of frustration and disillusion within their present employment. They can see no way of progressing within their present company, and out of sheer desperation decide to move in order to achieve their objectives. In many cases, this is the only available course; the mistake is in expecting the change of employer to bring about an instant solution to the career "blockage".

Without any doubt, the best way and the best chances of advancing status and responsibility or changing job function, exist within one's present company. If all attempts — rather than assumptions! — to progress make it clear that there are no real opportunities to pursue one's aspiration, then the best alternative is to move. However, it only makes sense if such a move is "sideways" into another company where the new job can be tackled with confidence, using existing skills and experience to achieve early success.

Of course, it is essential to establish at the interview stage that real potential exists for promotion into the kind of job you wish to pursue. If subsequent employment does not lead to the satisfaction of your aspirations, you have either chosen the wrong company, or you never really had the talent in the first place.

Setting up your own business is an altogether different affair and many books have been written on the multifarious ramifications of such a venture.

I suspect that most people who say they would like to set up their own business if only they had an original idea, or if only they could obtain the finance, do so merely for effect. It is as if they feel obliged to protect an entrepreneurial image and create the impression that they have the drive, talent, enthusiasm and courage to go beyond the foetal position of being an employee, if only their fates were not against them. The fact is, one does not need an original idea to set up a new business and there is never a shortage of financial backing for a sound business proposition. There are innumerable examples from fish and chip shops to the whole of Japanese industry, which make it abundantly clear that originality can be a positive disadvantage.

The most difficult thing about setting up your own business is merely the act of starting out, and my simple, yet deceptively obvious advice for those who are determined to go it alone, but are unsure of what they should do, is simply to do what you do best in the industry you know best.

Alan Williams

PUZZLE ANSWER

SMR

Sales & Marketing Recruiters Ltd

A Sales and Marketing Services Company

SALES EXECUTIVES

Refresh The Parts Of Your Potential That Your Present Employer Cannot Reach!

There is a lot of uncertainty in the computer industry at the present time. Many of the giants of the computer establishment are reorganising and rationalising in the hope of getting in tune with market realities, whilst a myriad of entrepreneurial upstarts euphorically attempt to get an act together with "cloned" micros and panacea software. Neither is a situation that implies present security or future satisfaction for sales people.

Our client is one of the big international success stories of the computer industry with a considerable reputation for innovation and quality and a turnover rapidly moving towards £1 billion. Their product range extends from large computer systems to micros embracing among other things, DDP and small business systems. They are a large, secure and fast expanding organisation that manages to maintain all the benefits of a small company environment. Substantial new products come along with astounding regularity and everything points towards a very exciting and successful future.

The company's next phase of expansion calls for the recruitment of experienced computer people who have a substantial record of success in selling computer systems to industry and commercial end-users as well as major systems houses in
